Brief Introduction of China's second BUR

Qingxian Gao
Chinese Research Academy of Environmental Sciences

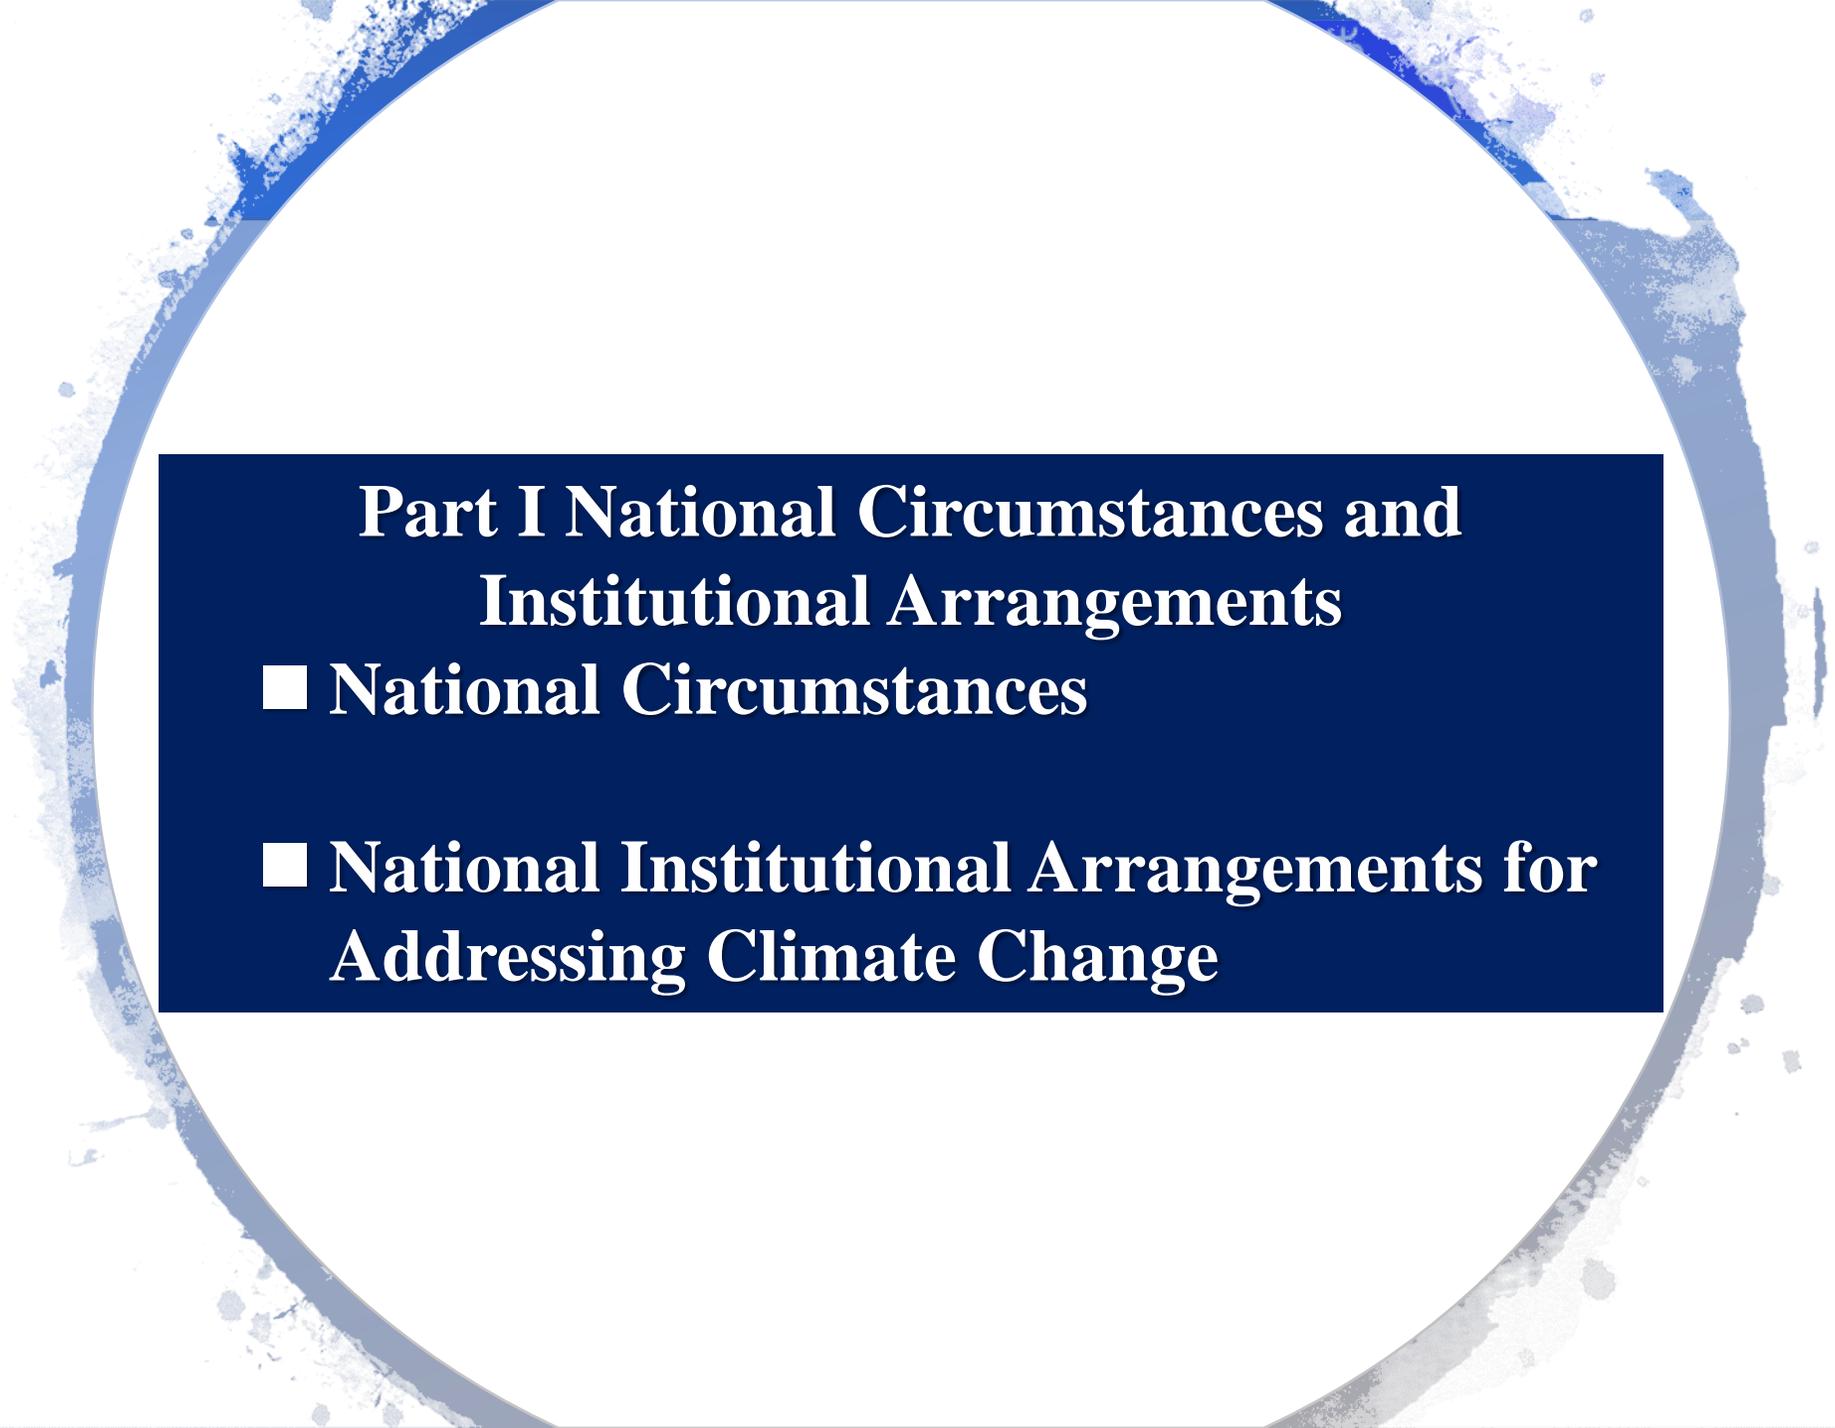

懷天立地惠民，承實創新奉獻

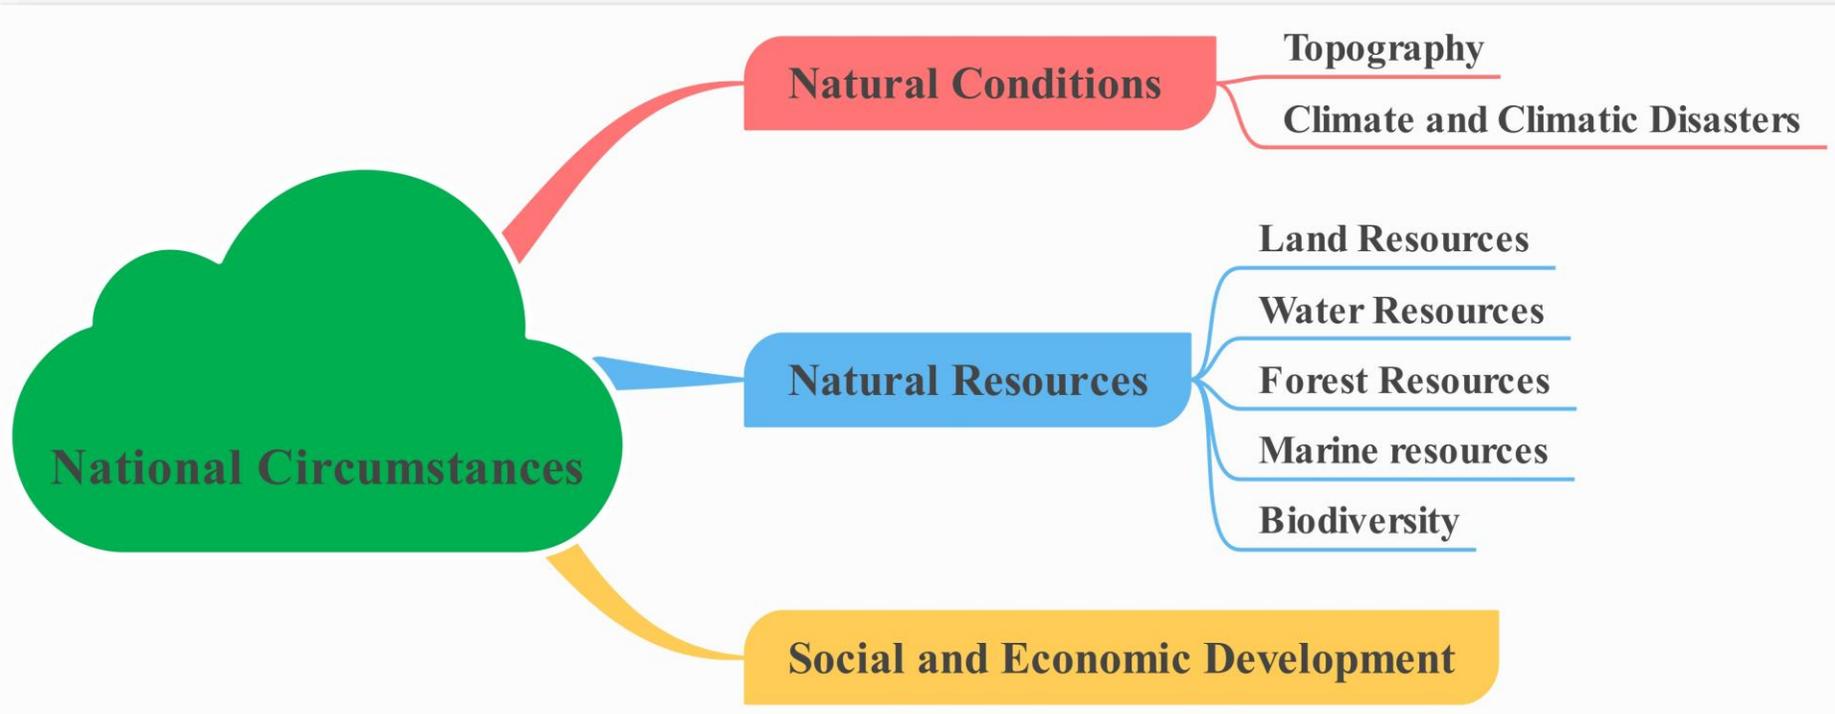

Contents

- Background
- National Circumstances and Intuitional Arrangements
- National Greenhouse Gas Inventory
- Mitigation Actions and their effects
- Basic information of HK SAR on addressing Climate Change
- Basic Information of Macao SAR on addressing Climate Change

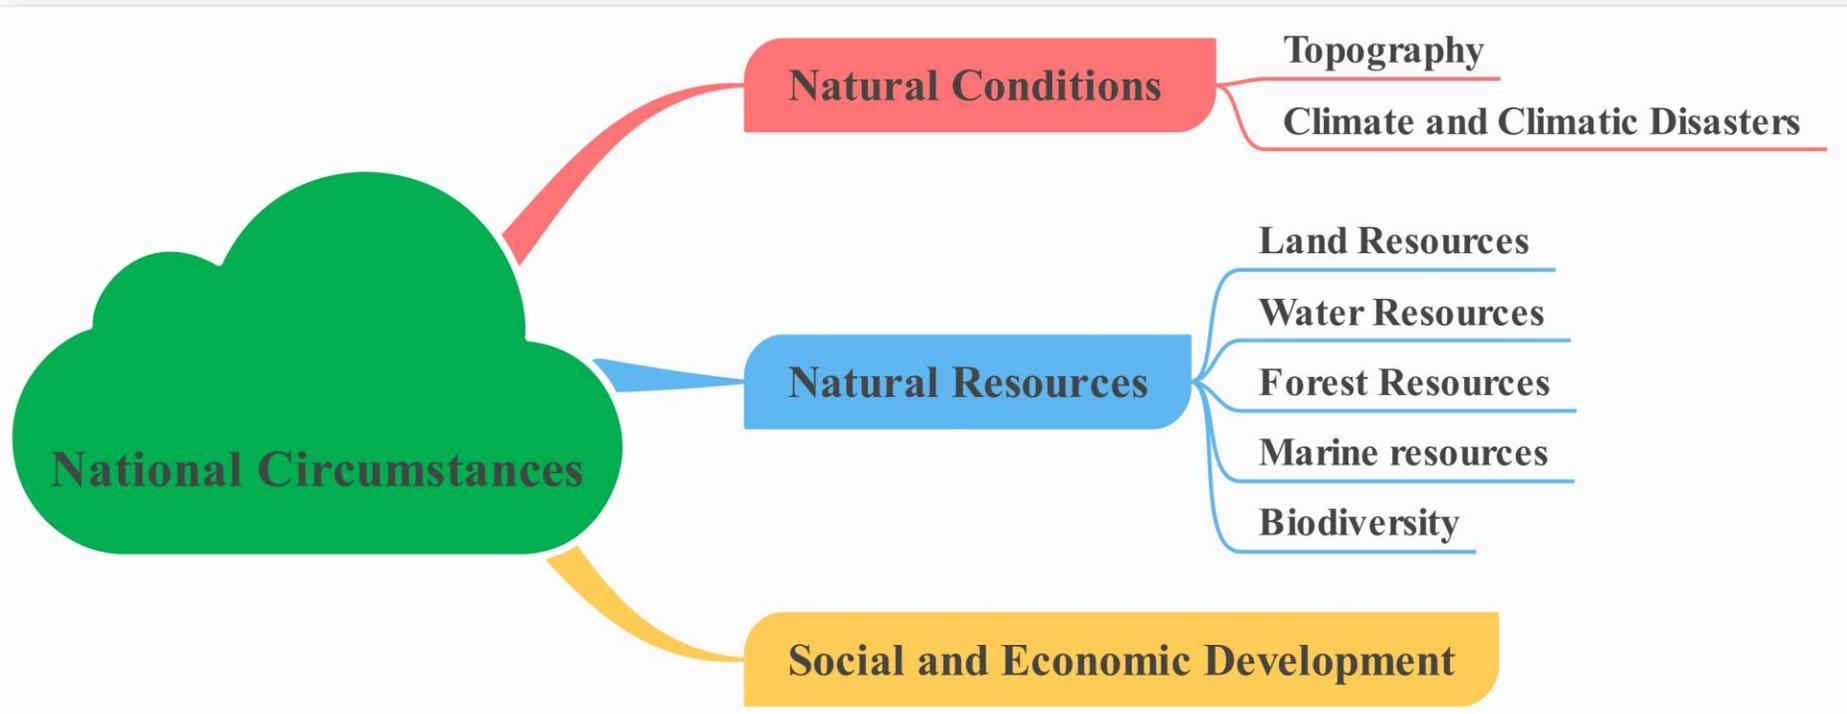

Part I National Circumstances and Institutional Arrangements

- **National Circumstances**
- **National Institutional Arrangements for
Addressing Climate Change**

- Vary Significantly
- Complexity and diversity
 - Monsoon climate
 - Temperate continental climate
 - Alpine climate
- Frequent disastrous weather
 - Drought
 - Floods
 - Cold waves
 - Typhoons
 - Sandstorms

- FR-rank high [area and stock]
 - Forest resources uneven
 - Per capita are lower than the global average.
- MR-wide see areas, Rich in
 - Marine organisms
 - Marine minerals
 - Ocean space
 - Ocean water
 - Marine renewable energy
- BD-protection of BD
 - Diversity of ecosystems
 - Diversity of species

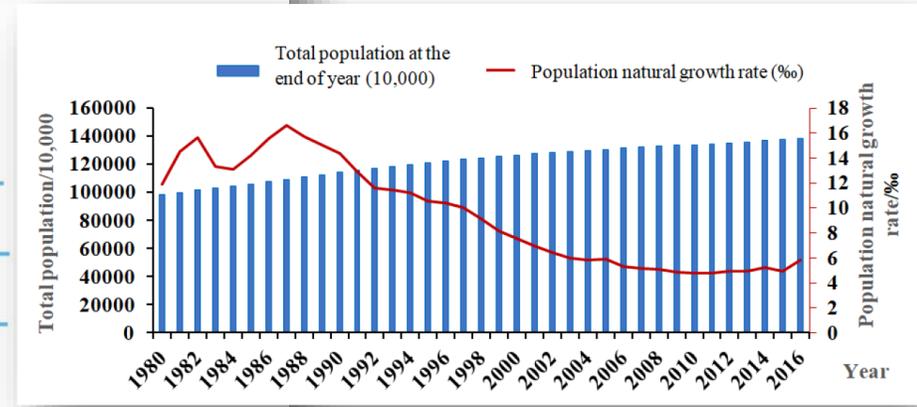

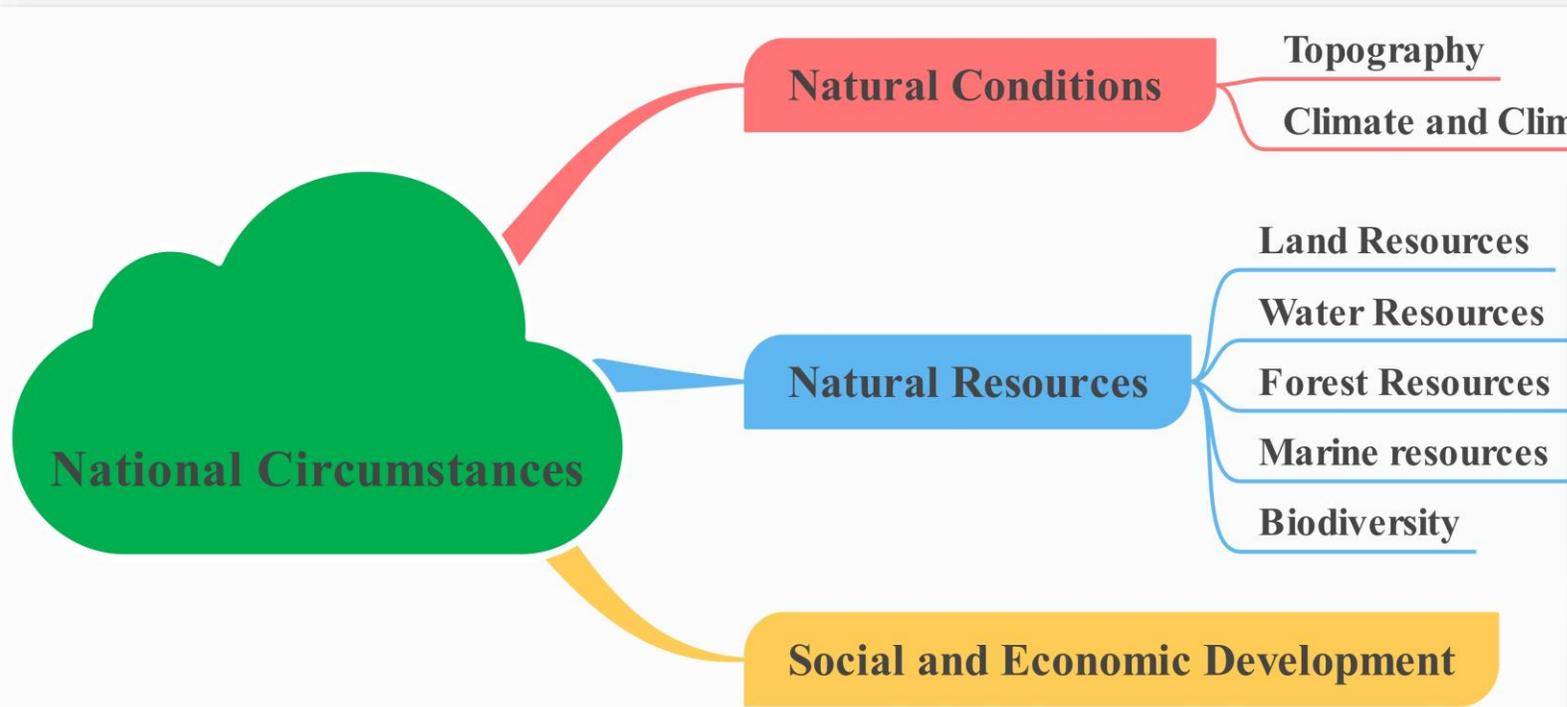

Table 1-1 Population Indicators of China and the World in 2016

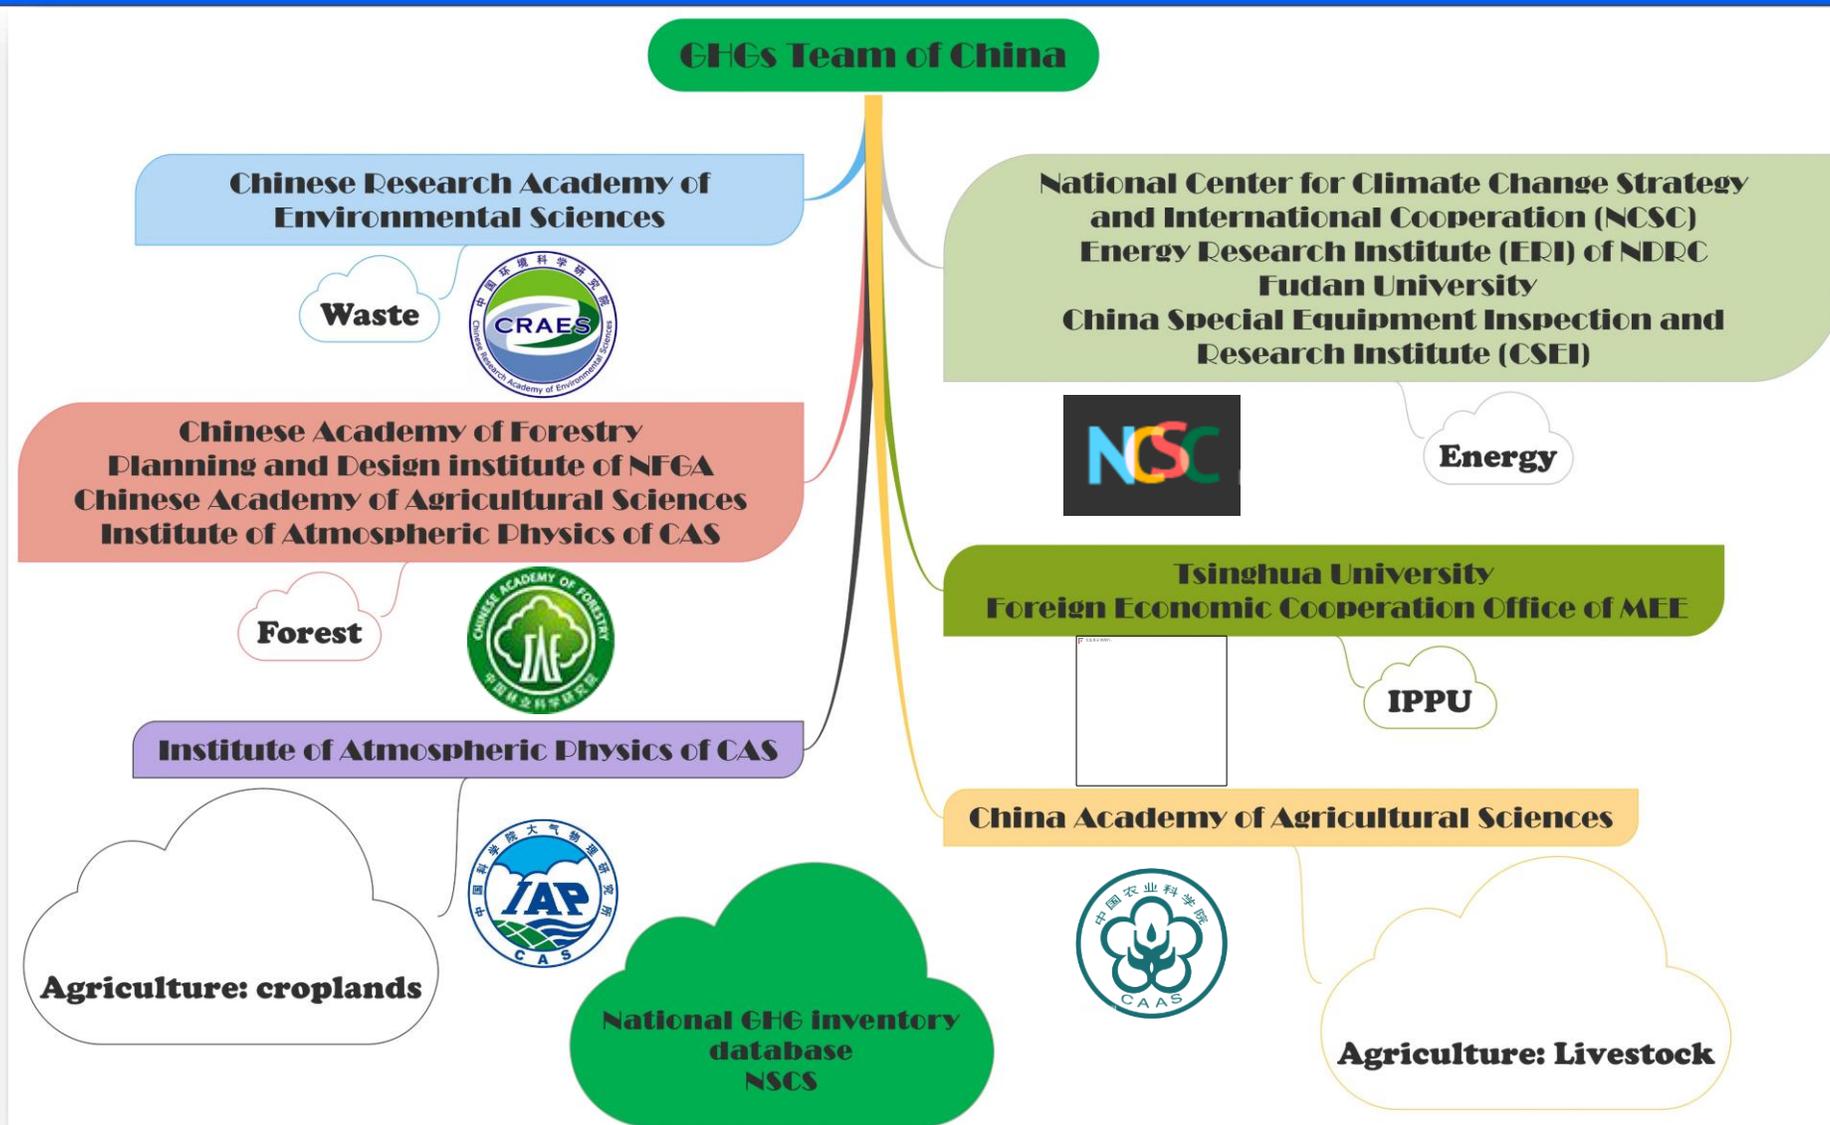

| Population Indicators | China | World |
|------------------------------------|-------|-------|
| Population natural growth rate (‰) | 5.86 | 11.24 |
| Birth rate (‰) | 12.95 | 18.89 |
| Mortality rate (‰) | 7.09 | 7.65 |
| Average life expectancy (years) | 76.5 | 71.9 |

Part II National Greenhouse Gases Inventory

- **Scope and Methodologies**
- **National GHG Inventory in 2014**
- **QA/QC**
- **Information on Inventories in Previous Submissions**

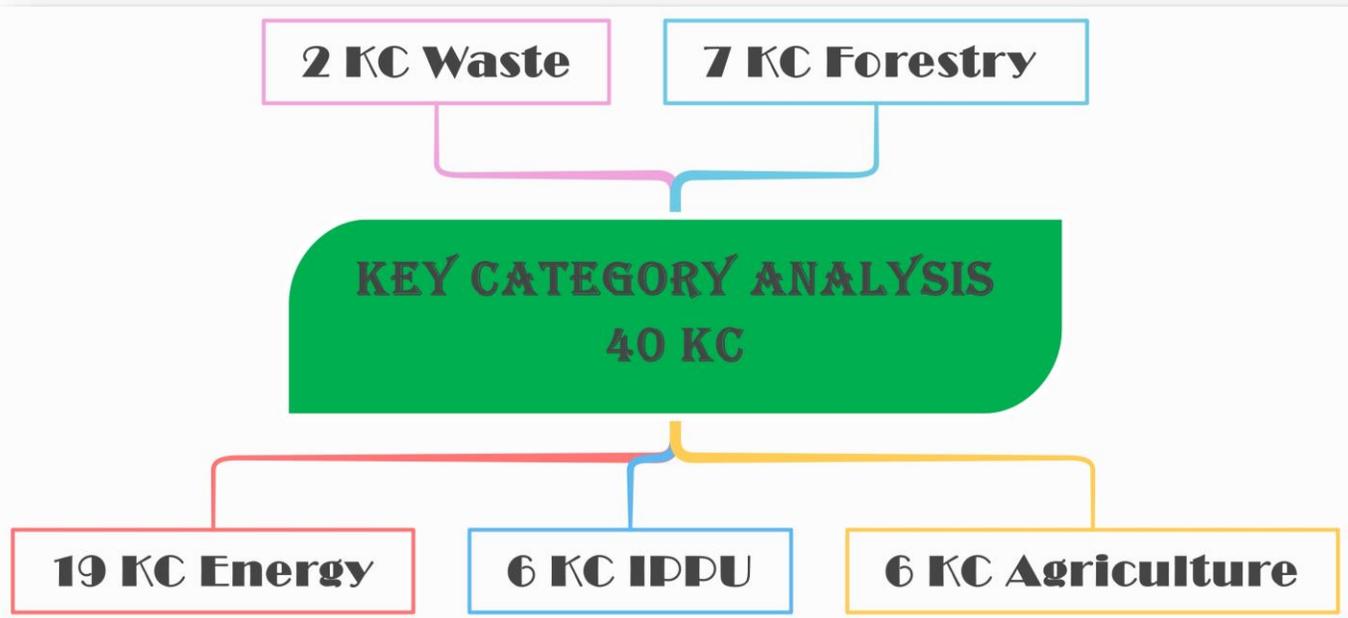

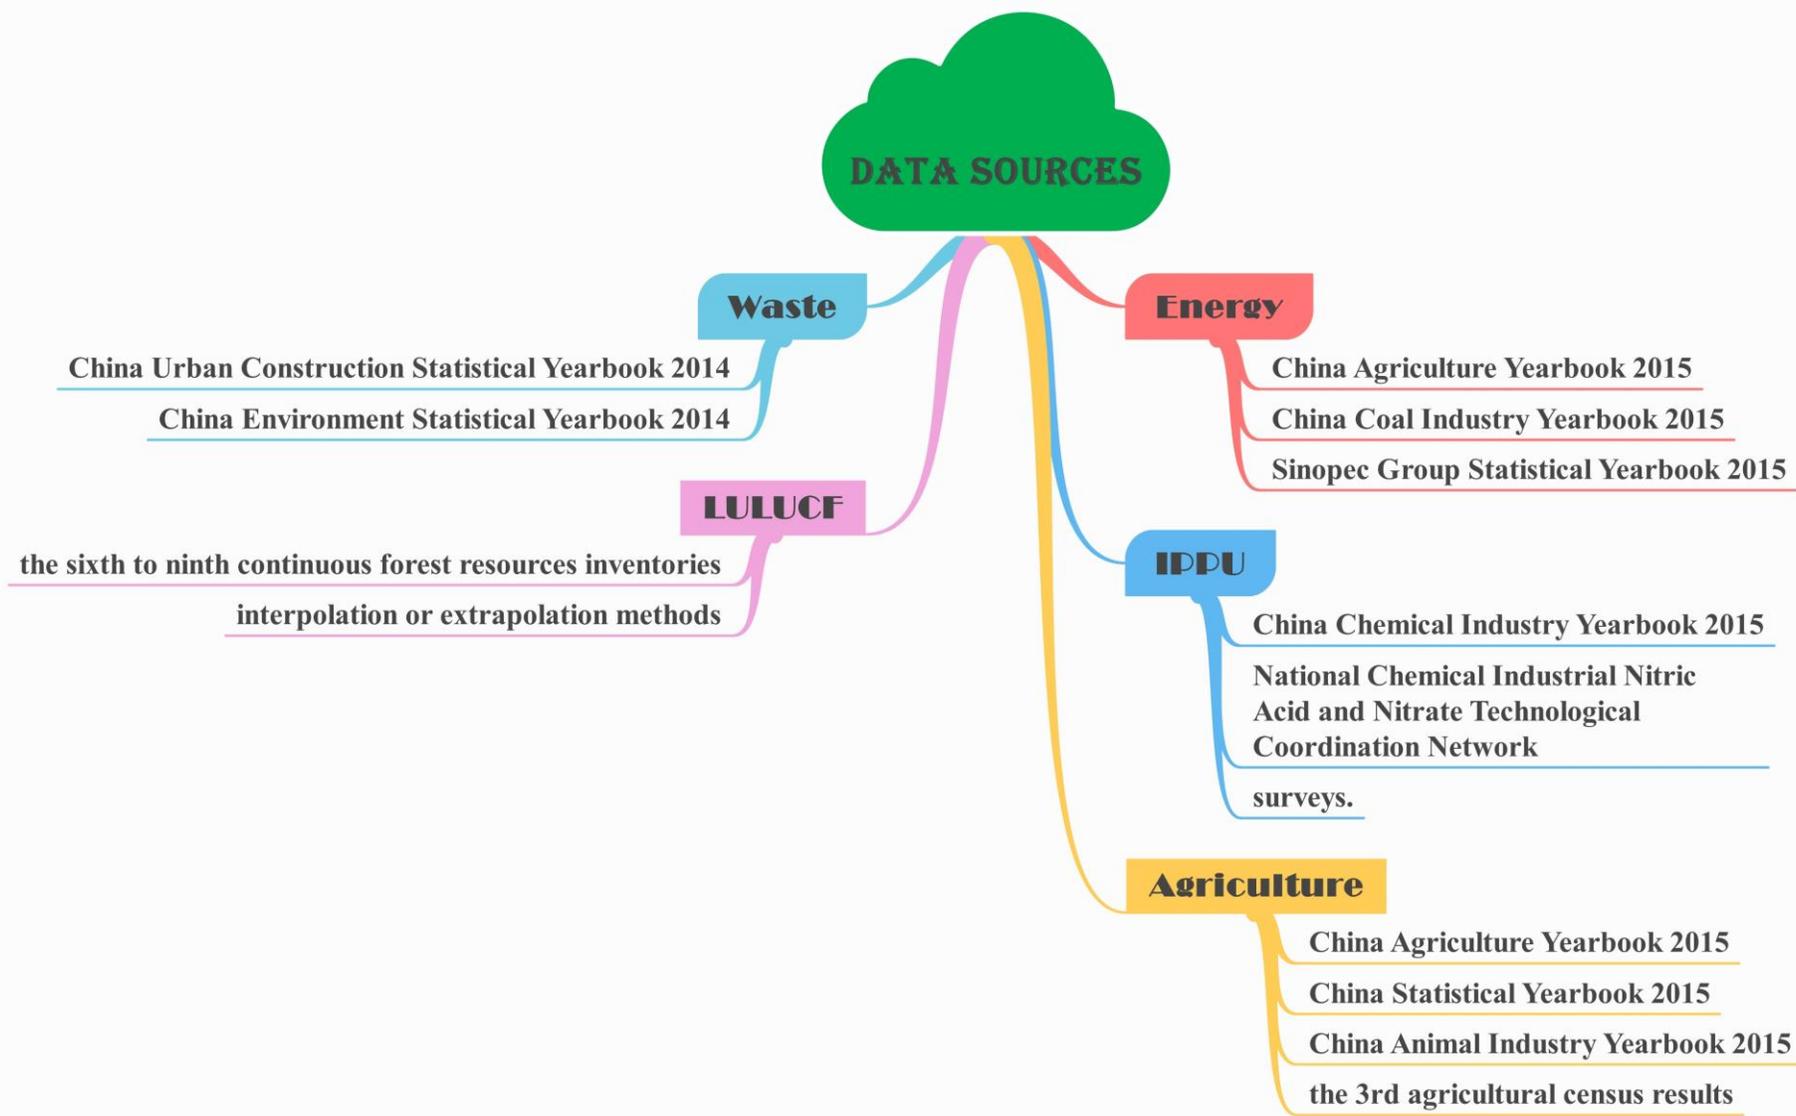

Table 2-1 Methodologies Used for the National GHG Inventory of 2014

| Source/ Sink Categories | CO ₂ | | CH ₄ | | N ₂ O | |
|---|-----------------|------------------|-----------------|------------------|------------------|------------------|
| | Method | Emission Factors | Method | Emission Factors | Method | Emission Factors |
| Energy industry | T2 | CS | T1,T2 | D,CS | T1,T2 | D,CS |
| Manufacturing industries and construction | T2 | CS | T1 | D | T1 | D |
| Transportation | T2 | CS | T1,T3 | D,CS | T1,T3 | D,CS |
| Other sectors | T2 | CS | T1 | D | T1 | D |
| Other | T2 | CS | T1,T2 | D,CS | T1,T2 | D,CS |
| Fugitive emissions from solid fuels | | | T1,T2 | D,CS | | |
| Fugitive emissions from oil and natural gas | | | T1,T3 | D,CS | | |
| Mineral products | T1,T2 | D,CS | | | | |
| Chemical industry | T1,T2 | D,CS | NE | NE | T3 | CS |
| Metal production | T1,T2 | D,CS | T1 | D | NE | NE |
| Enteric fermentation | | | T1,T2 | D,CS | | |
| Manure management | | | T1,T2 | D,CS | T2 | D,CS |
| Rice cultivation | | | T3 | CS | | |
| Agricultural soils | | | NE | NE | T1,T2 | D,CS |
| Field burning of agricultural residues | | | T1 | D,CS | T1 | D,CS |
| Forest land | T2 | CS | | | | |
| Cropland | T3 | CS | IE | IE | IE | IE |
| Grassland | T2 | CS | IE | IE | IE | IE |
| Wetlands | T2 | CS | T2 | CS | NE | NE |
| Settlements | T2 | CS | | | | |
| Other land | T1 | D | | | | |
| Harvested wood products | T2 | CS | | | | |
| Solid waste | T1,T2 | CS | T1,T2 | D,CS | T1 | D,CS |
| Wastewater treatment | | | T1,T2 | D,CS | T1,T2 | D,CS |

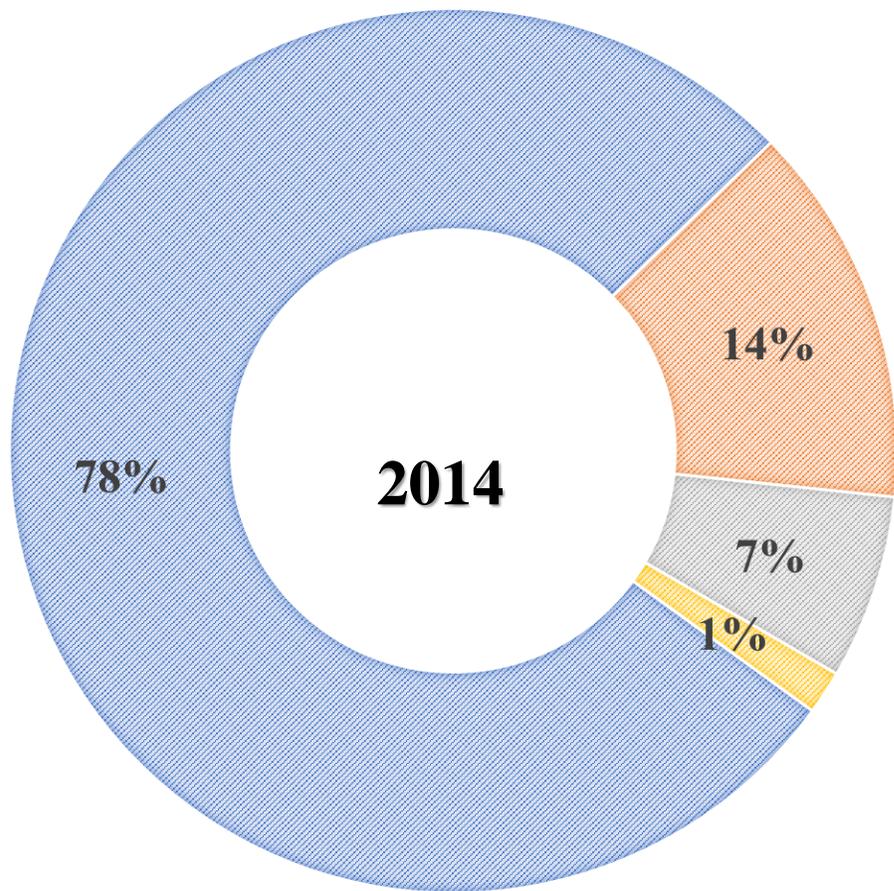

Note: 1. The methodological codes T1, T2 and T3 represent Tier 1, Tier 2 and Tier 3 methods respectively.
 2. The emission factor code CS represents the country-specific emission factor in China, D represents the defaulted IPCC emission factor.
 3. IE (included elsewhere) stands for sources which have been calculated and reported under other sub-categories. NE (not estimated) stands for existing emissions and removals which have not been estimated.
 4. Their parallel appearance shows that the sub-items use different Tier methods or emission factor data sources.

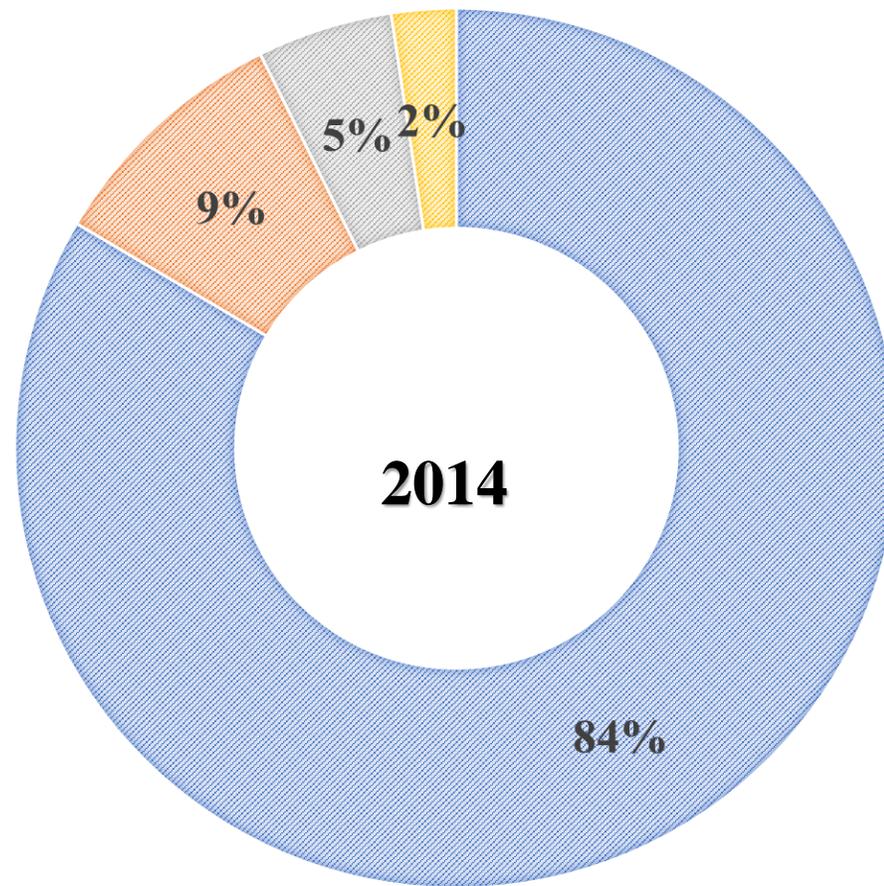

National GHG Inventory in 2014

Efforts to Reduce Uncertainties

Emission factors:

Methods :

key category analysis

using as many higher-level specific EF

the activity data

system for addressing

the net calorific value

investigation.

Management :

■ Emphasized the management of data file.

■ The materials supporting the preparation were archived in a timely manner.

■ Established a database system for the national and sector GHG Inventories.

■ Organized technical seminars.

■ invited experts who were not involved in to carry out independent analysis and review of the inventory's methodologies and results.

Results of Uncertainty Analysis of 2014 National GHG Inventory

| Sector | Emission/ Sink (Mt CO ₂ eq) | Uncertainties |
|----------------------|---|-------------------|
| Energy | 9,559 | -5.2%~5.3% |
| Industrial processes | 1,718 | -3.9%~3.9% |
| Agriculture | 830 | -19.2%~20.4% |
| LULUCF | 1,115 | -21.1%~21.2% |
| Waste | 195 | -23.2%~23.2% |
| Overall | | -5.2%~5.3% |

Part III Mitigation Actions and Their Effects

- Policies and Targets for GHG Emission Control
- Mitigation Actions and Progress
- Analysis on the Results of Major Mitigation Actions

The nationally appropriate mitigation actions (NAMAs):

- To lower its CO₂ emissions per unit of GDP by 40%-45% compared with the 2005 level
- To increase the share of non-fossil energy in primary energy consumption to around 15%
- To increase forest area by 40 million ha and forest stock volume by 1.3 billion m³ compared with the 2005 level.

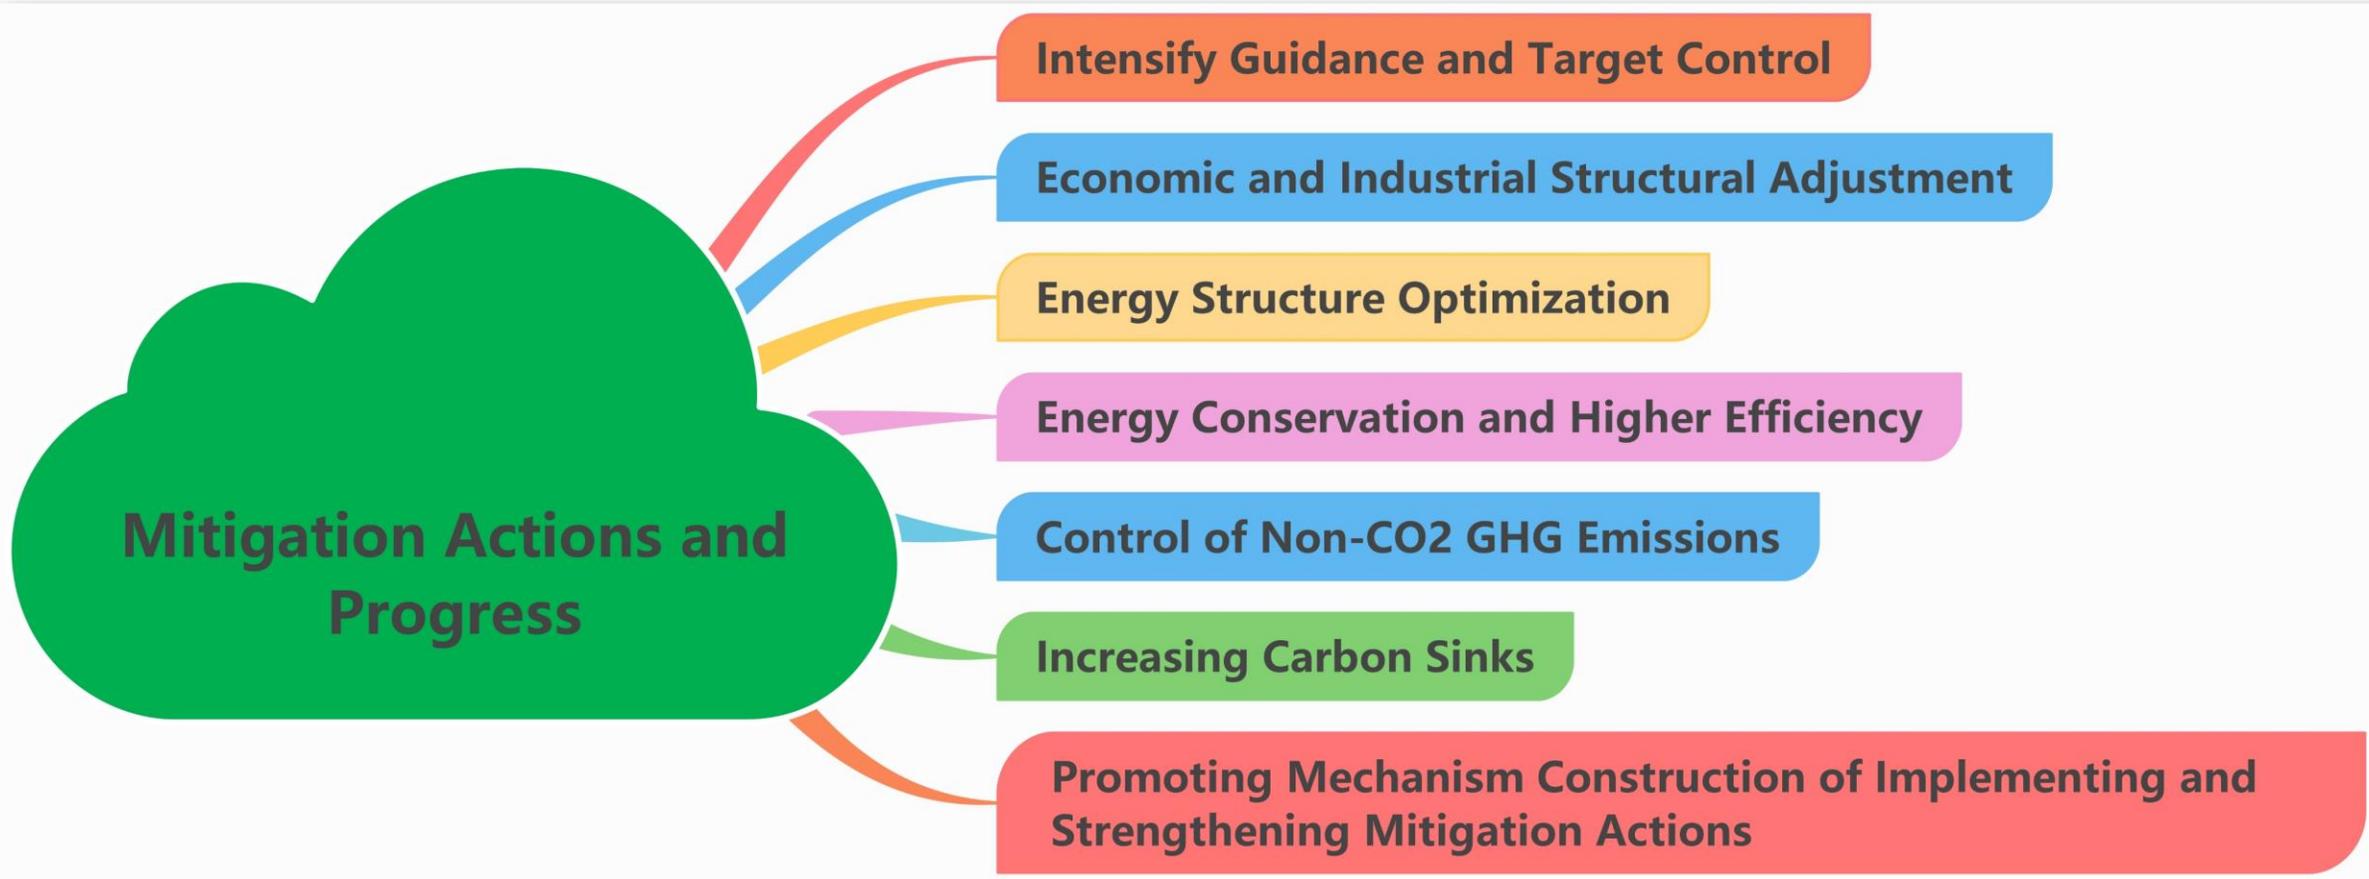

The Work Plan on Greenhouse Gas Emission Control for the 12th FYP

- The targets were to reduce carbon intensity dramatically, like a fall of 17% in 2015 compared with 2010;
- To achieve progress on the control of CO₂ emissions from non-energy-related activities and other greenhouse gas emissions including CH₄, N₂O, HFC, PFC and SF₆.

In GHG Control in 13th FYP

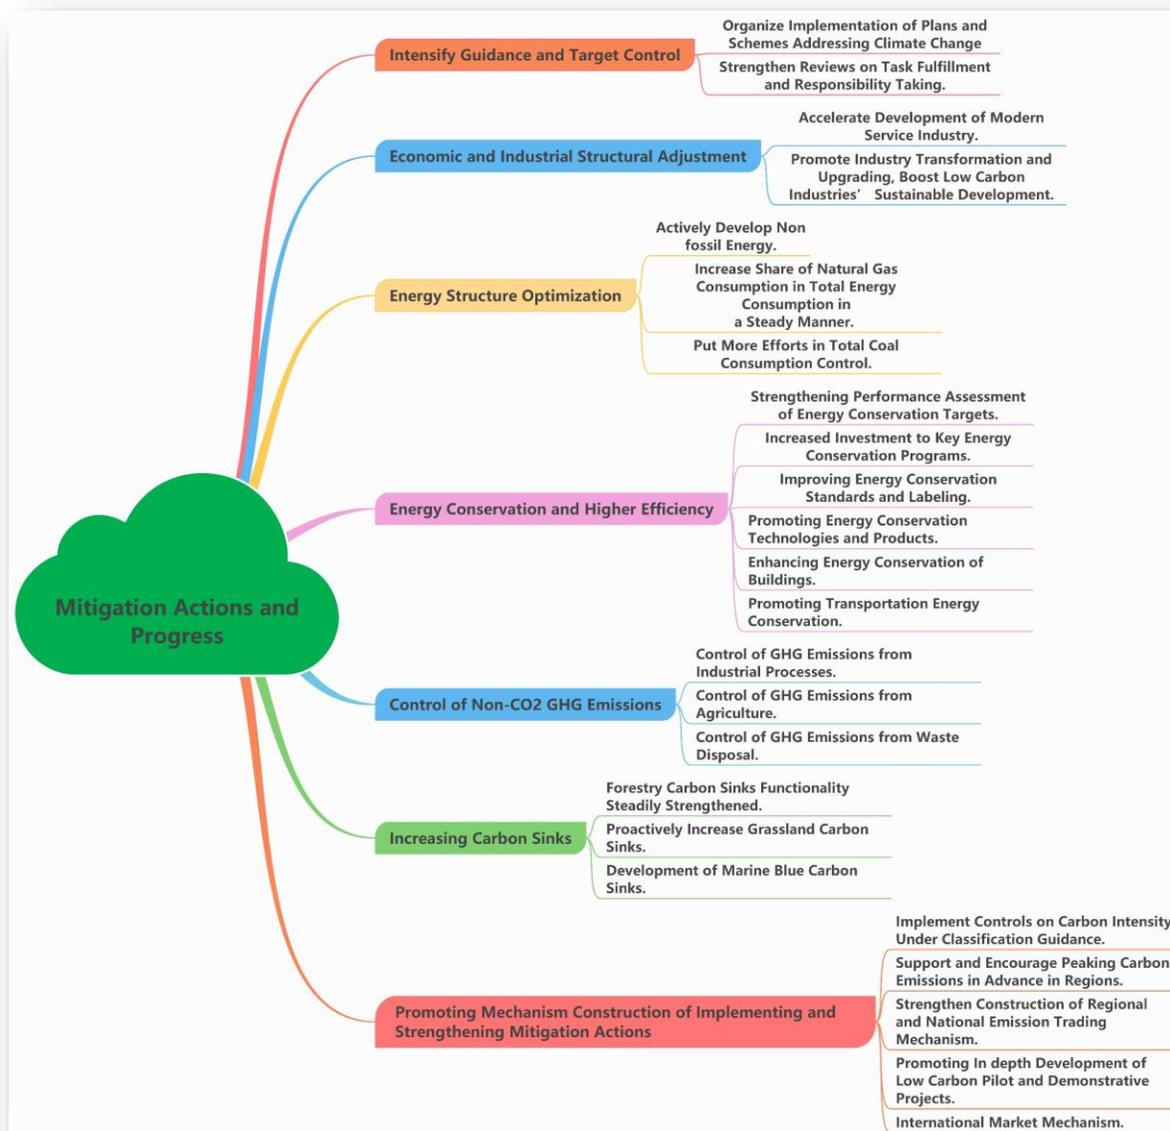

- To exert effective control on carbon emissions, and by 2020 carbon intensity is 18% lower than that of 2015;
- To put more efforts to control the emission of greenhouse gas other than CO₂, including HFCs, CH₄, N₂O, PFCs and SF₆;
- To increase significantly carbon sink capability.

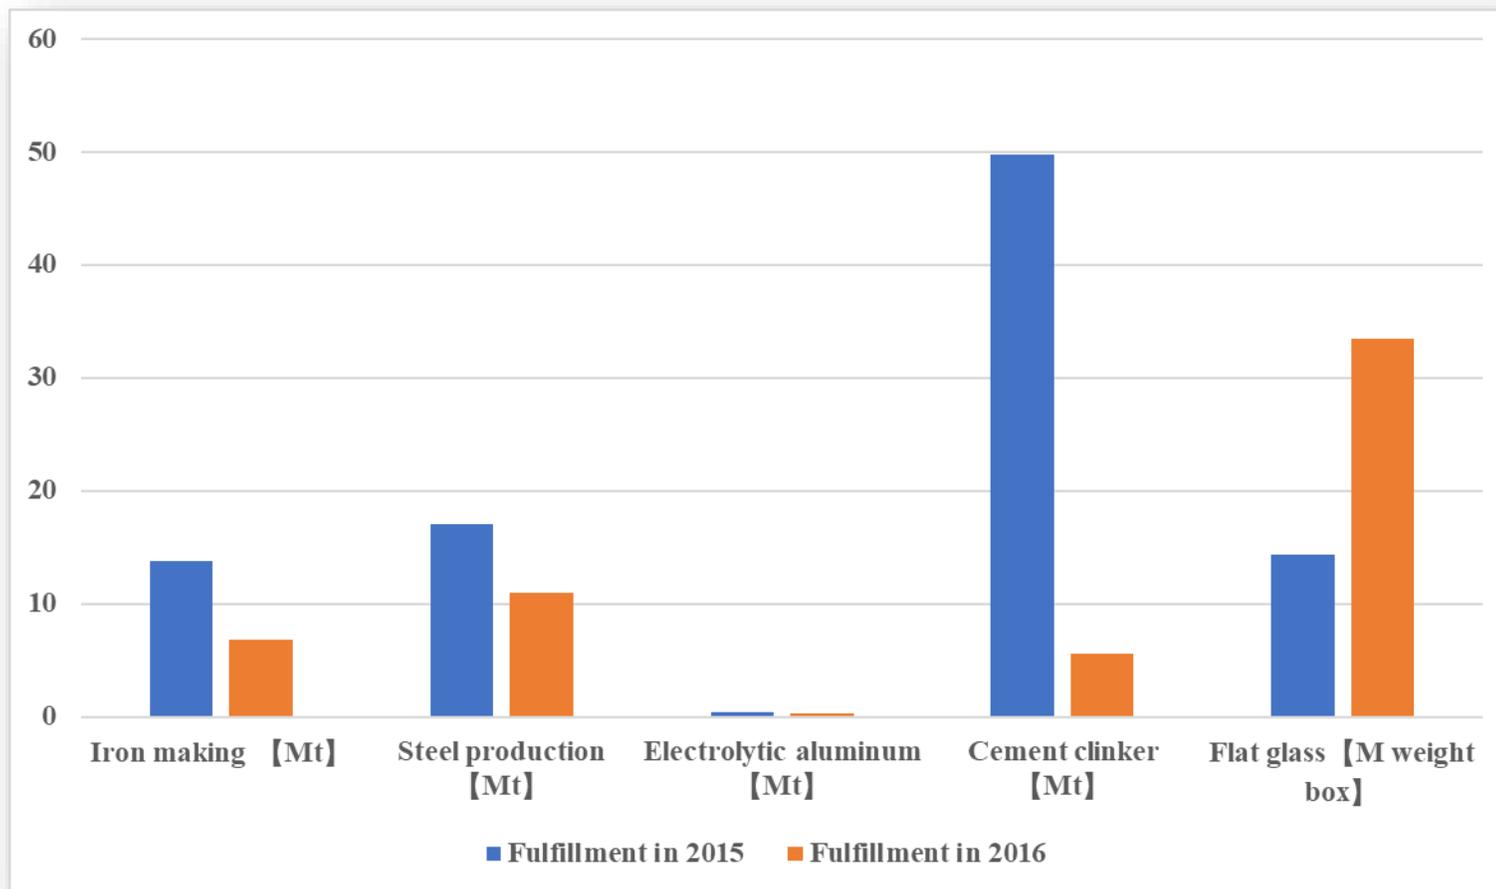

Mitigation Actions and Progress

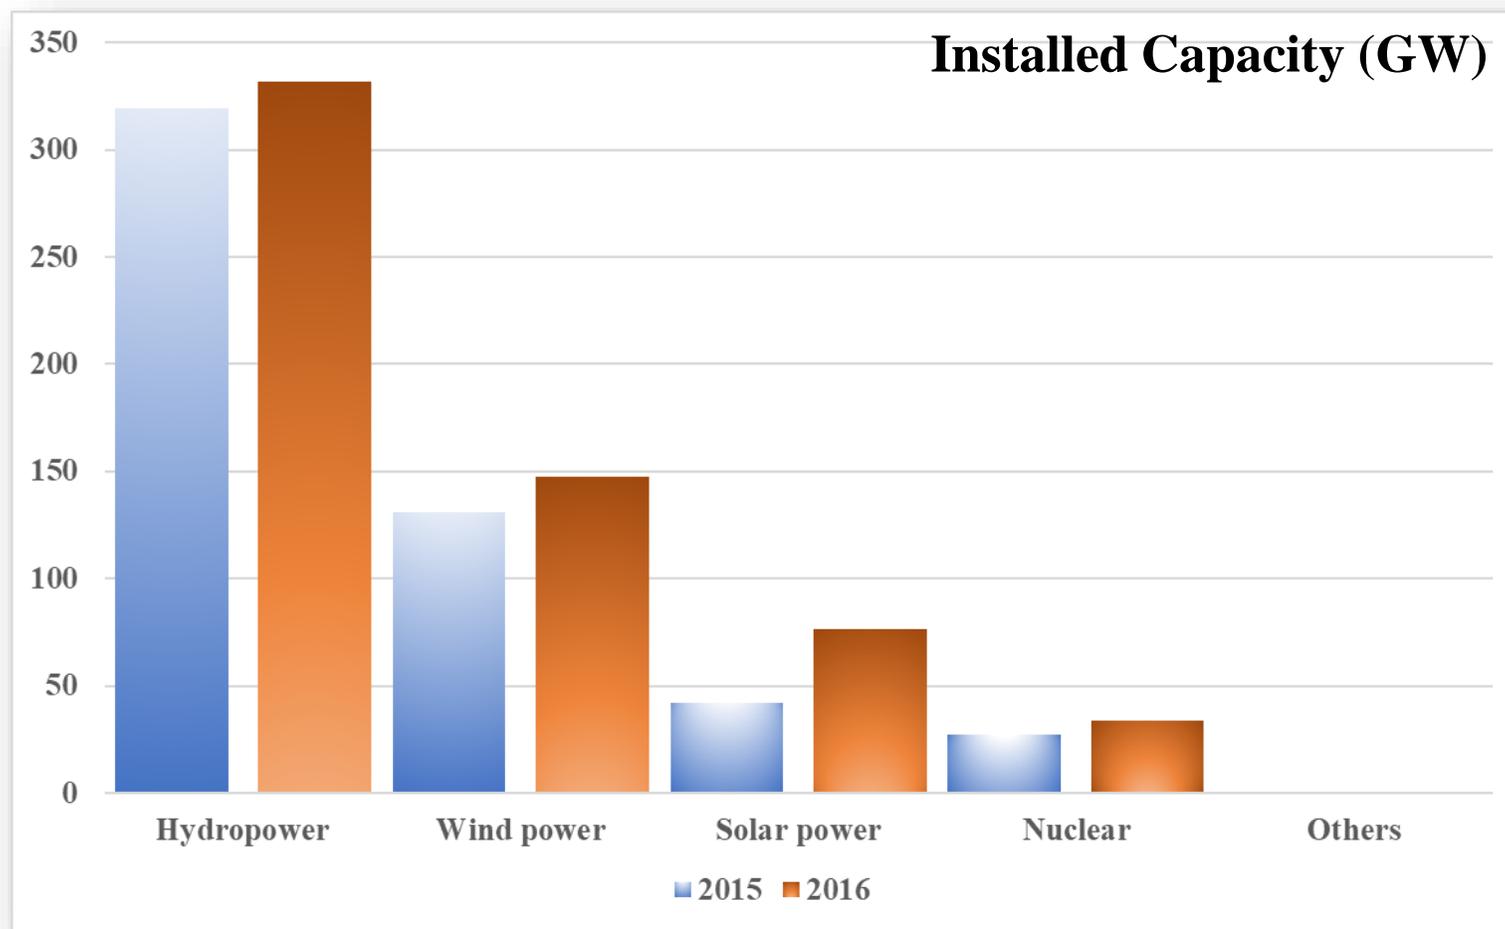

傾天立地惠民，承賡創新奉獻

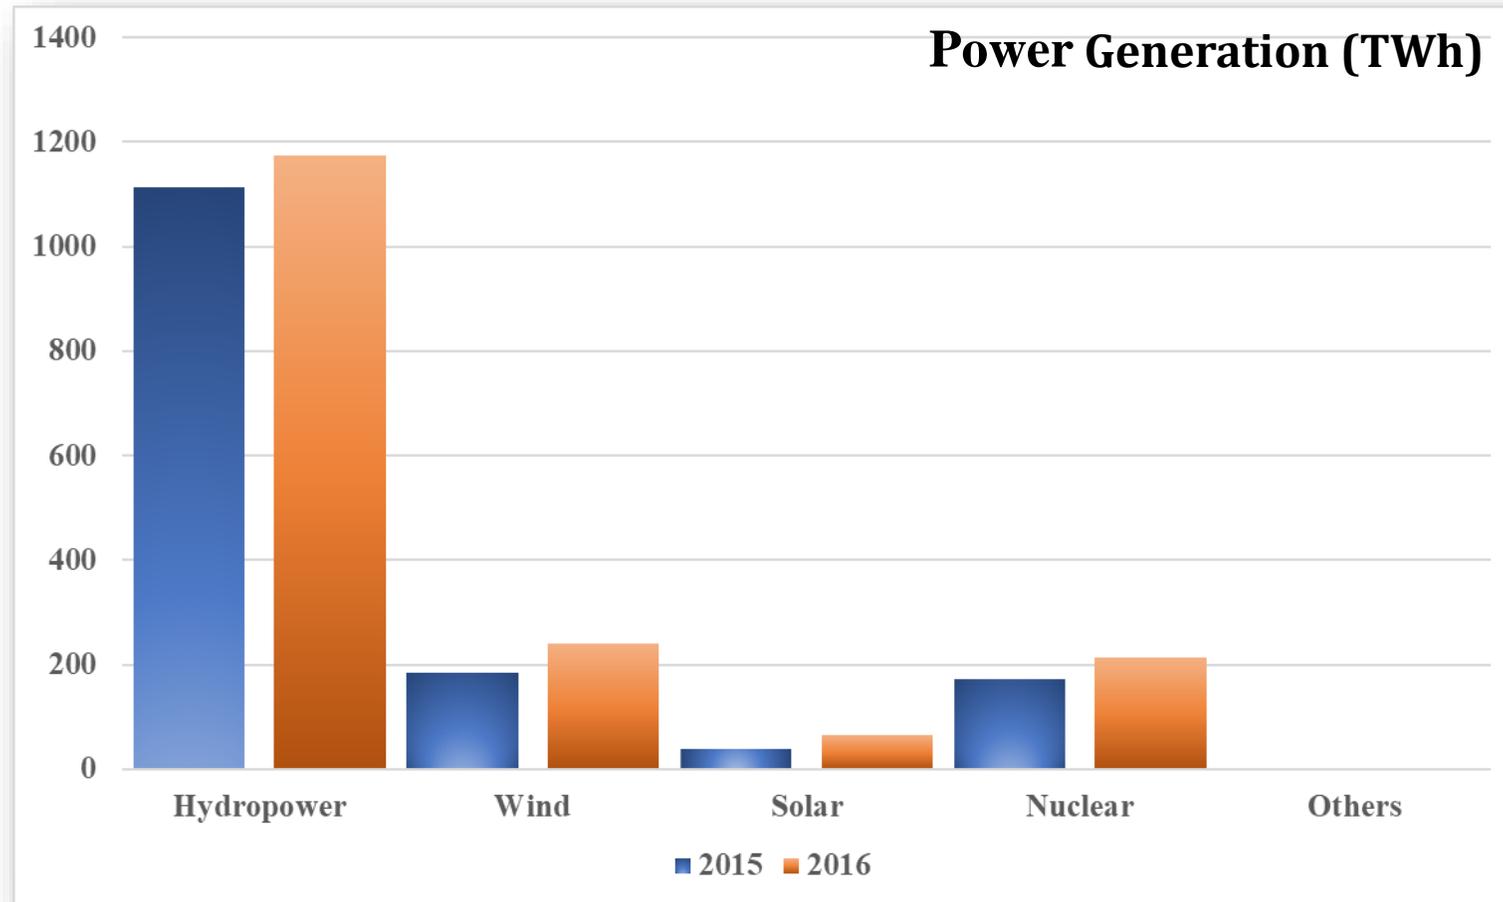

Promote Industry Transformation and Upgrading, Boost Low Carbon Industries' Sustainable Development.

Increase Share of Natural Gas Consumption in Total Energy Consumption in a Steady Manner.

Increase Share of Natural Gas Consumption in Total Energy Consumption in a Steady Manner.

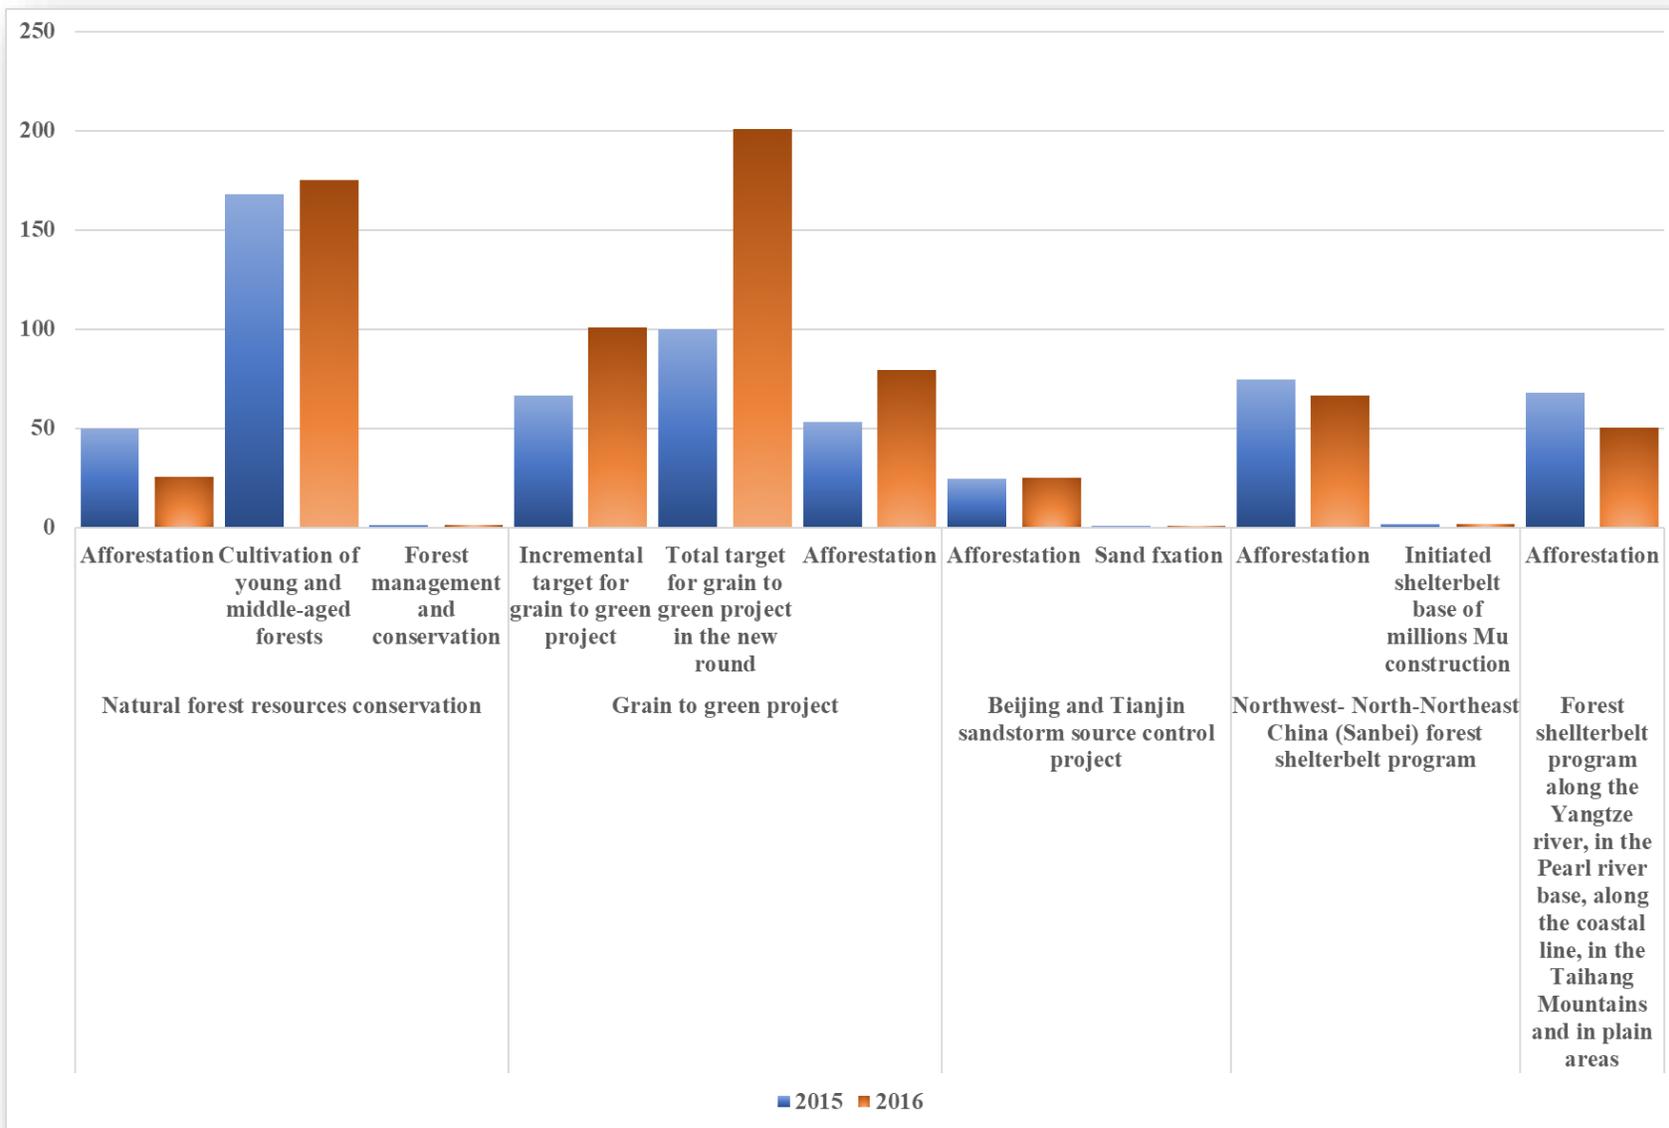

Forestry Carbon Sinks Functionality Steadily Strengthened.

| Progress of Five Major Forestry Protection and Restoration Projects | | | | |
|--|--|----------------------|-------|-------|
| project | Sub-project | Unit | 2015 | 2016 |
| Natural forest resources conservation | Afforestation | 10000 hectares | 49.9 | 25.6 |
| | Cultivation of young and middle-aged forests | 10000 hectares | 167.8 | 175.3 |
| | Forest management and conservation | 100 million hectares | 1.15 | 1.15 |
| Grain to green project | Incremental target for grain to green project | 10000 hectares | 66.7 | 100.7 |
| | Total target for grain to green project in the new round | 10000 hectares | 100 | 200.7 |
| | Afforestation | 10000 hectares | 53.3 | 79.6 |
| Beijing and Tianjin sandstorm source control project | Afforestation | 10000 hectares | 24.7 | 25.1 |
| | Sand fixation | 10000 hectares | 0.79 | 0.98 |
| Northwest- North-Northeast China (Sanbei) forest shelterbelt program | Afforestation | 10000 hectares | 74.55 | 66.7 |
| | Initiated shelterbelt base of millions Mu construction | Piece | 2 | 2 |
| Forest shelterbelt program along the Yangtze river, in the Pearl river base, along the coastal line, in the Taihang Mountains and in plain areas | Afforestation | 10000 hectares | 68 | 50.6 |

Mitigation Actions and Progress

樹木立地惠民，承實創新奉獻

Analysis on the Results of Major Mitigation Actions

Table 3-6 Mitigation Actions and Effects

Avoided Carbon Emission from Energy Conservation.

In 2016, the energy consumption per ten thousand yuan of GDP decreased by 5.0%

The annual energy reduction over 200 Mtce

Equivalent to emission reductions of 490 Mt of CO₂

Avoided Carbon Emission from Energy Structure Improvement.

Non fossil energy in the total energy consumption rose to 13.3% in 2016

The installed power generating capacity of non fossil energy was 590 GW, accounting to 35.7% of the total installed capacity

the power generation amount of non fossil energy was 1,700 TWh, with an increase of 190 TWh than 2015

The proportion of consumed natural gas in the total energy consumption increased from 5.9% in 2015 to 6.2%.

112 Mt and 8 Mt of CO₂ emissions were saved respectively.

Table 3-6 Mitigation Actions and Effects

| No. | Action Name | Objectives or Main Contents | Concerned Departments/ GHG | Time - horizon | Nature of Action | Supervision Departments | Status | Progress | Methodologies and Hypotheses | Estimated Emission Reduction Effects ¹ | Receive Support |
|---|------------------------------|---|--------------------------------------|----------------|---------------------|-------------------------|--|---|--|---|--|
| 1 | Nationwide mitigation action | Reduce the CO ₂ emissions per unit of GDP by 40%-45% over 2005 by 2020 | Various Departments/ CO ₂ | 2006 -2020 | Compulsiv Governme: | | | Reduce the CO ₂ emissions per unit of ' by 6.1% over 2015 '016 | Calculate the CO ₂ emission amount by multiplying the consumption of coal, petroleum and natural gas corresponding the average emission factor | / | Support from the central finance or the local finance |
| Energy Structure Optimization | | | | | | | | | | | |
| 2 | Developing non-fossil energy | Increase the proportion of non-fossil energy consumption to around 13% by 2016; Increase the proportion of non-fossil energy | CO ₂ etc. | 2016 -2020 | Compulsiv Governme: | | | proportion of non-fossil energy in energy consumption was % in 2016, up 1.2 | Emission reduction=(current-year non-fossil fuel consumption -current-year energy consumption×2015 share of non-fossil energy in total energy consumption) ×implied emission | Reduce CO ₂ emissions by 110 million tons in 2016 | Support from the central finance or the local |
|  | | | | | | | | | | | |
| No. | Action Name | Objectives or Main Contents | Concerned Departments / GHG | Time - horizon | Nature of Action | Status | Progress | Methodologies and Hypotheses | Estimated Emission Reduction Effects | Receive Support | |
| 3 | Developing natural gas | natural gas consumption to around 6.3% by 2016; Increase the share of natural gas consumption in total energy consumption to over 10% by 2020 | CO ₂ etc. | 2016 -2020 | Government | | NEA, NDRC and other relevant departments | In Progress | The proportion of natural gas in total energy consumption increased from 5.9% in 2015 to 6.2% in 2016 | Emission reductions = (consumption of natural gas in the year - total energy consumption in the year ×share of natural gas in 2015) × (the 2014 overall energy consumption emission factor of 2.14tCO ₂ /tce - the natural gas emission factor of 1.56tCO ₂ /tce) | Reduce CO ₂ emissions by 8 million tons in 2016 |
