

GOSAT observations of tropospheric CO₂ and CH₄
concentrations over permafrost regions
and
comparison with in situ measurements of the
ASCENDS/ABoVE 2017 airborne science campaign

TANSO-FTS onboard GOSAT

- Simultaneous measurements in SWIR and TIR at the exactly same footprint
→ vertical profile of GHG up to 2 layers in the troposphere
- 2 linear polarization measurements in SWIR
→ better correction for aerosols
- Pointing system
→ local emission sources
- 10 years observation with uniform quality (June 2009 ~)
- GHG emission from megacities
- **GHG emission from permafrost regions**

JAXA/EORC experimental algorithm

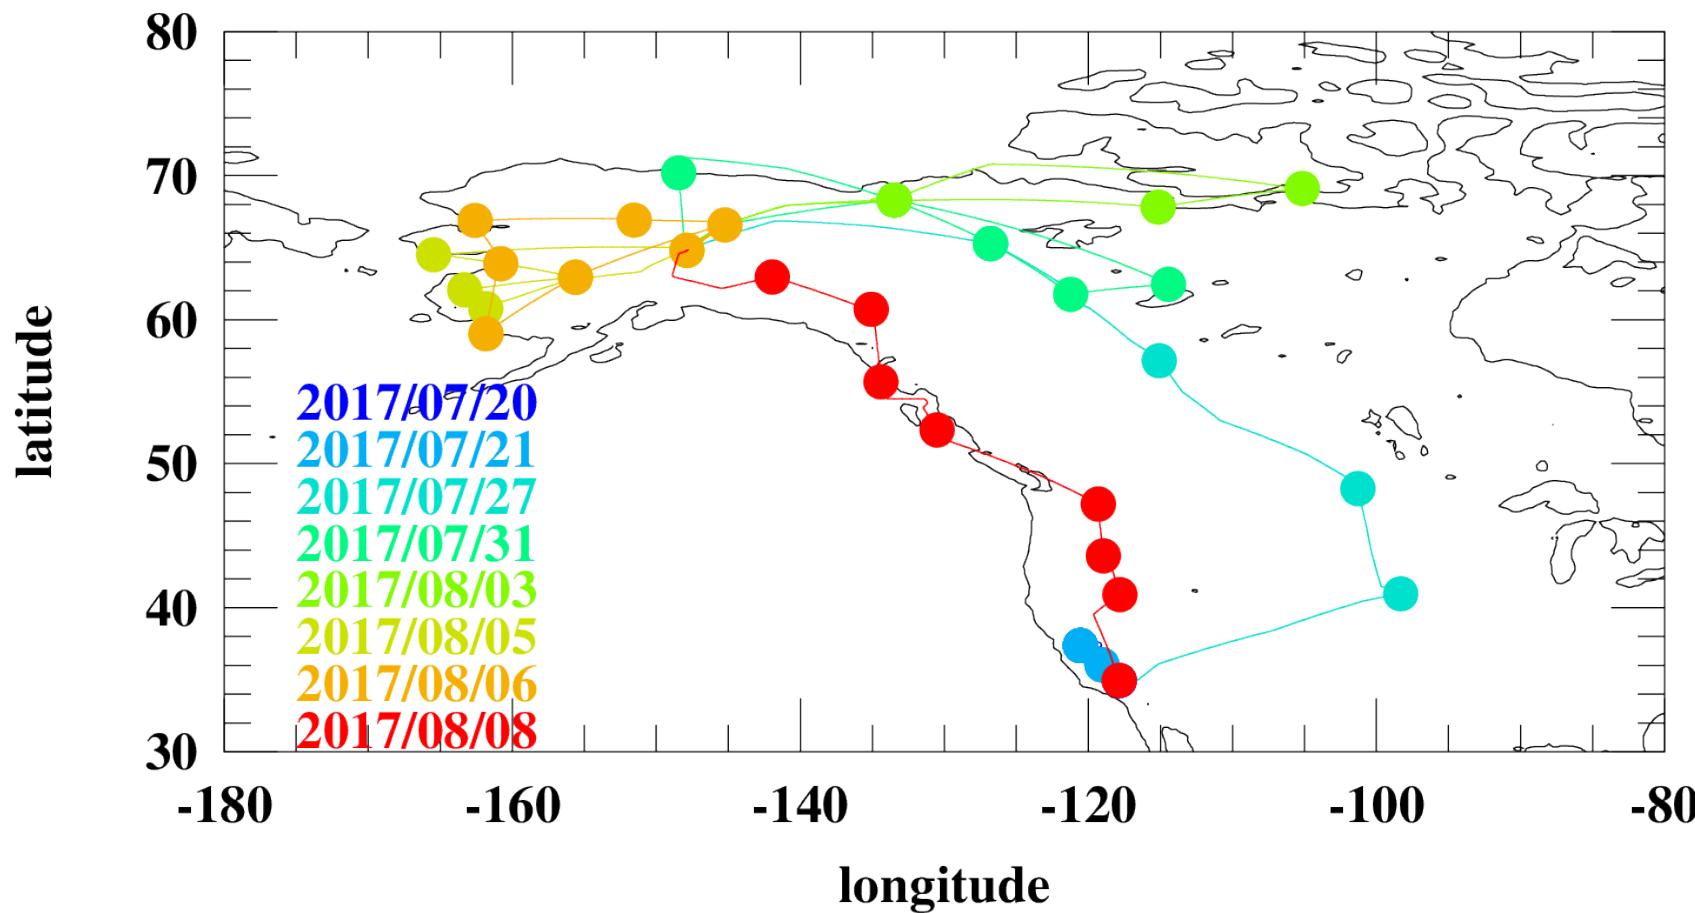

A full physics algorithm which uses:

- SWIR and TIR simultaneously
- Polarized spectra in SWIR

CO_2 and CH_4 retrieval:

- 5 layers in total, with 2 layers in the troposphere

ACENDS/ABoVE 2017 campaign

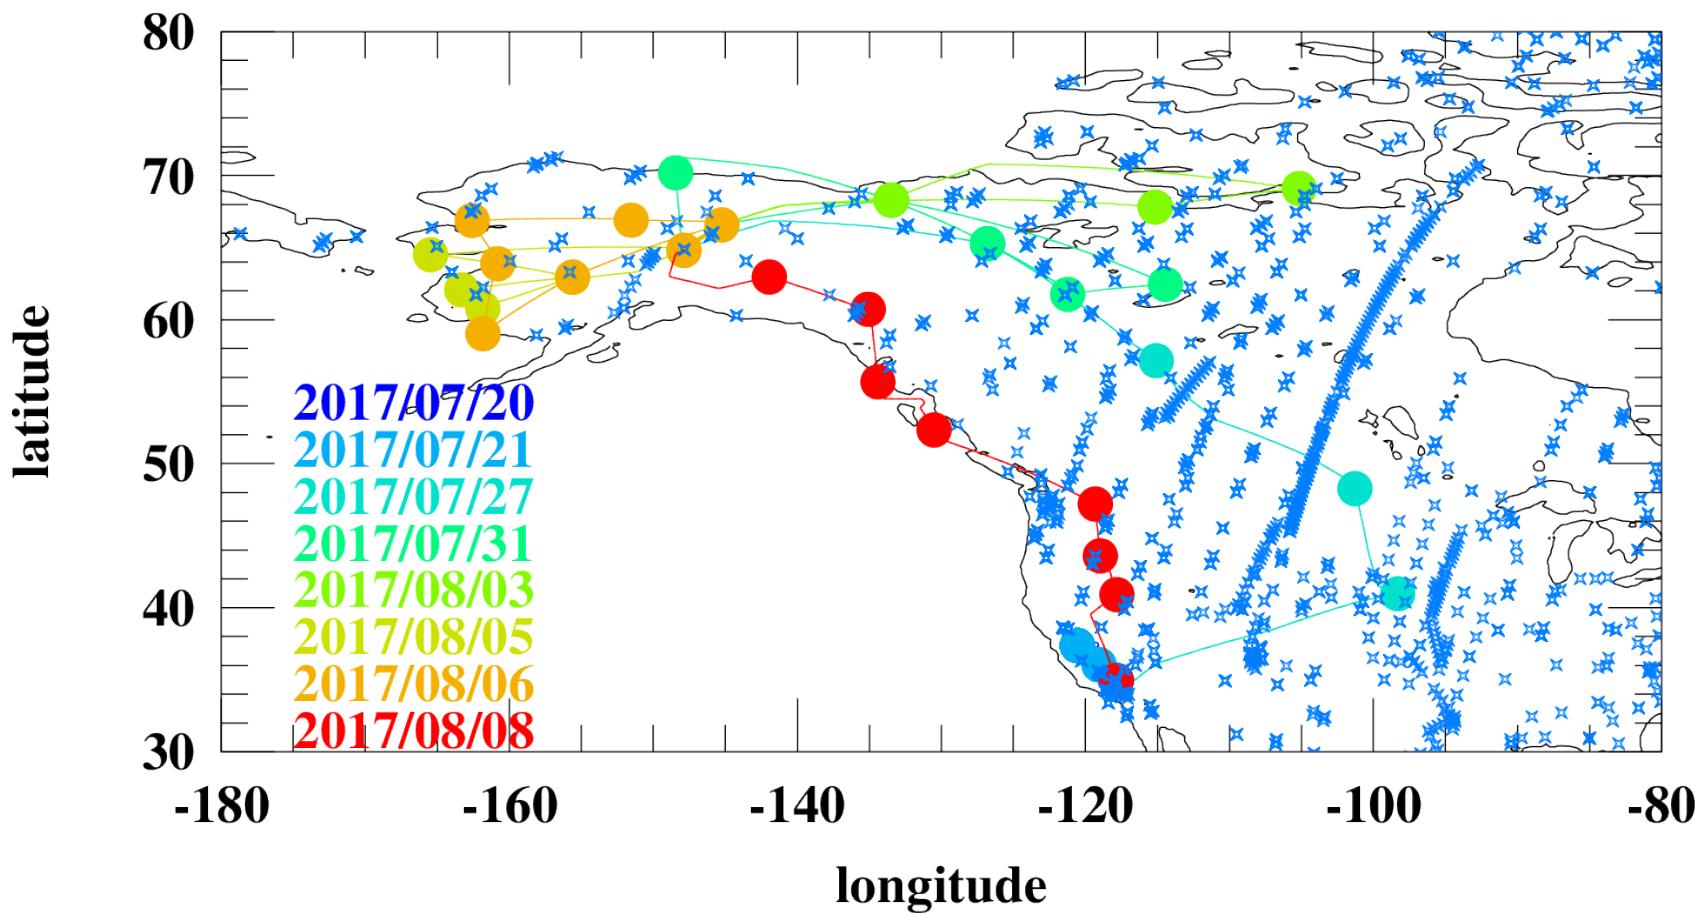

8 flights by NASA DC-8

- Lidar measurements for the ACENDS mission
- In situ measurements of CO₂ and CH₄ using Picarro

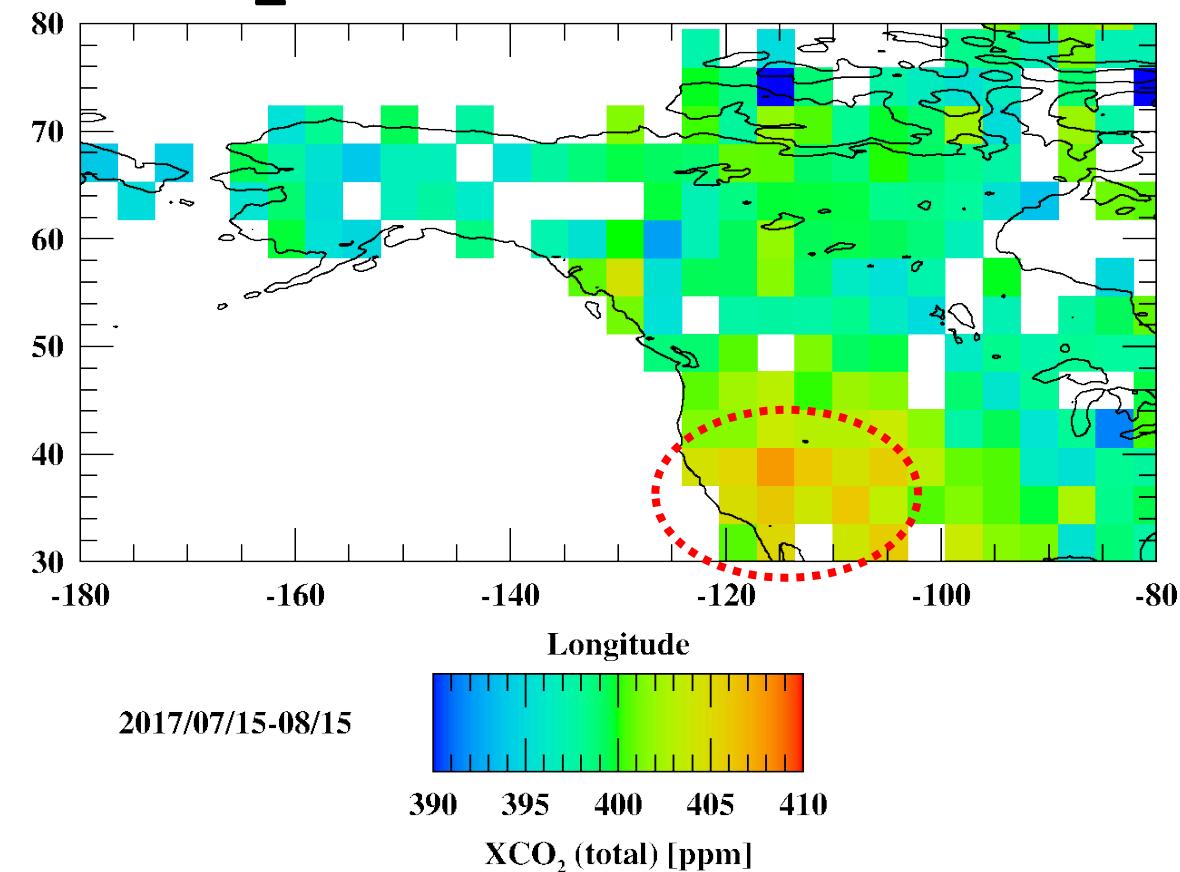

Total 47 vertical profiles

ASCENDS/ABoVE 2017 + GOSAT Jul 15-Aug 15

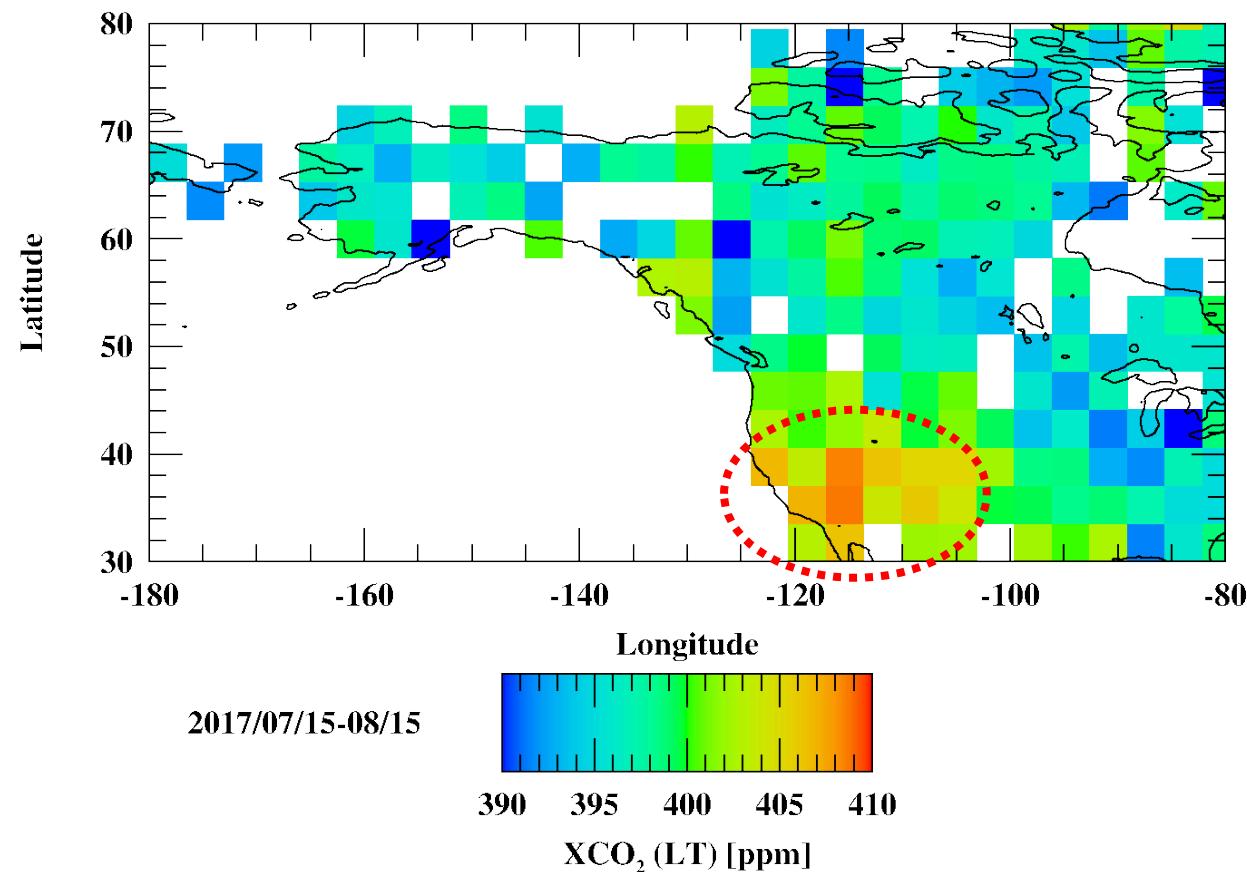

✖ GOSAT retrievals
which pass pre and
post screening

CO_2 1 month mean concentrations

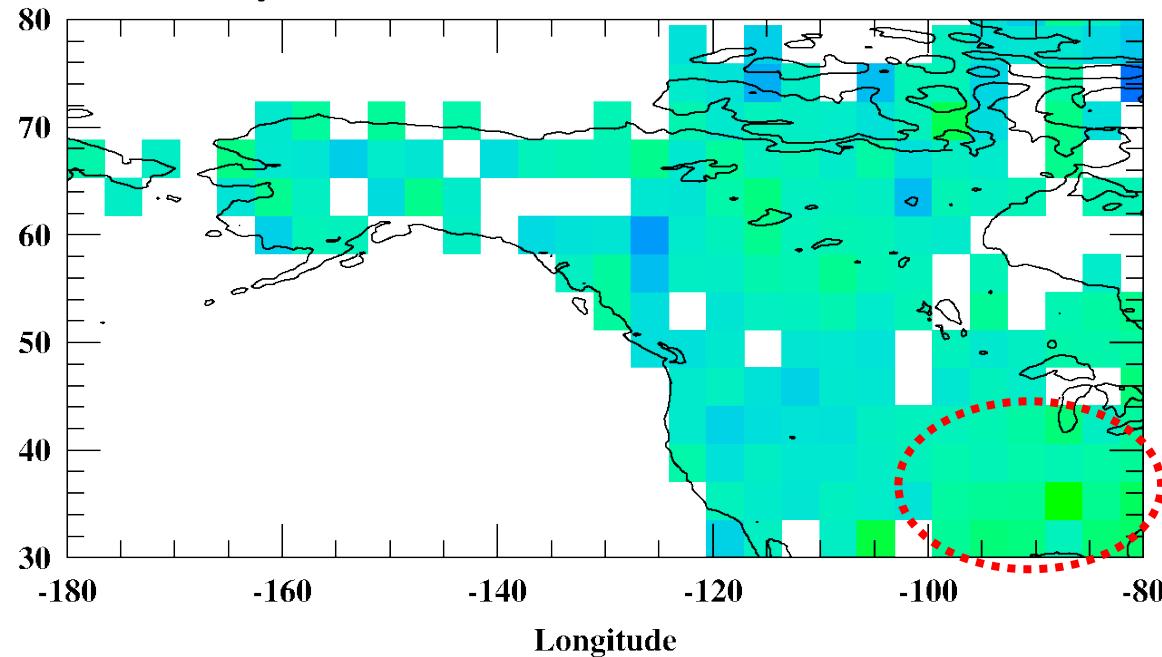

Column average

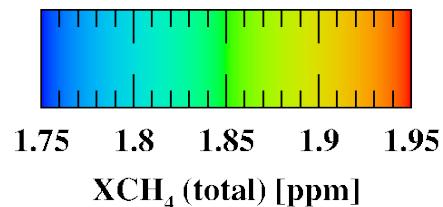

Lower troposphere

CH_4 1 month mean concentrations

Latitude

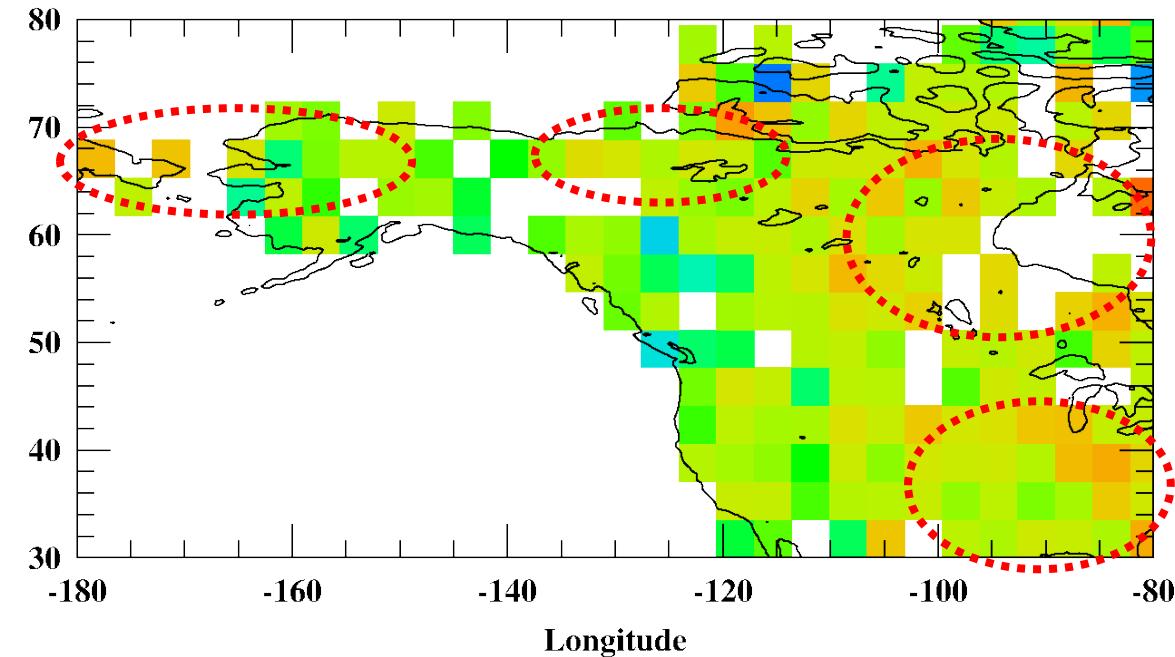

2017/07/15-08/15

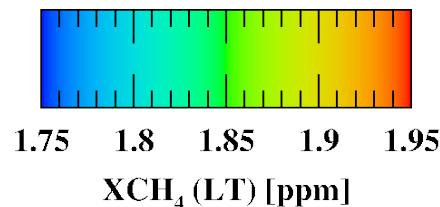

Column average

Latitude

2017/07/15-08/15

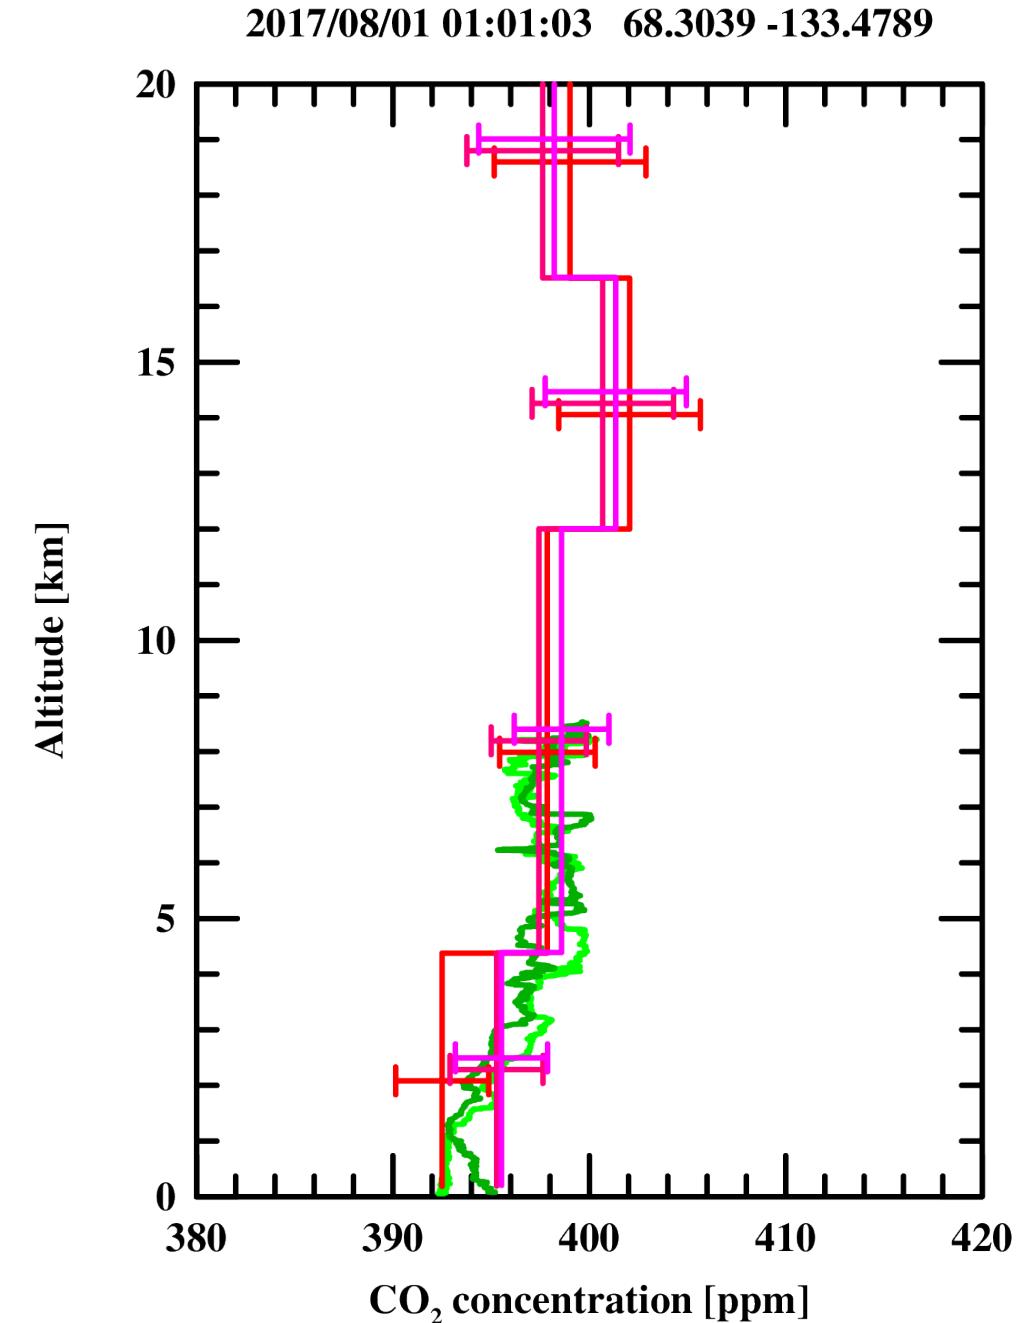

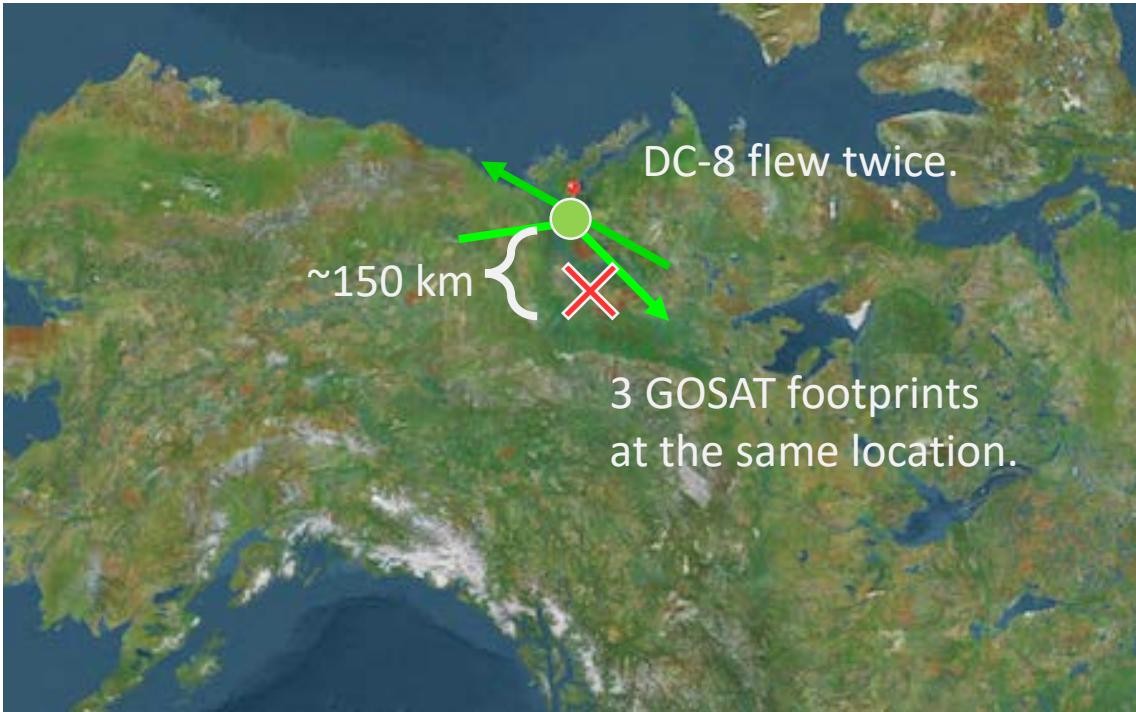

Lower troposphere

Comparison with the in situ data : Match up criteria

- $\Delta T < 6$ hours
- $\Delta \text{lat} < 2^\circ$ and $\Delta \text{lon} < 2^\circ$
- Nearest 3 GOSAT retrievals
- We have 7 sets of match up, with 2 in the permafrost region.

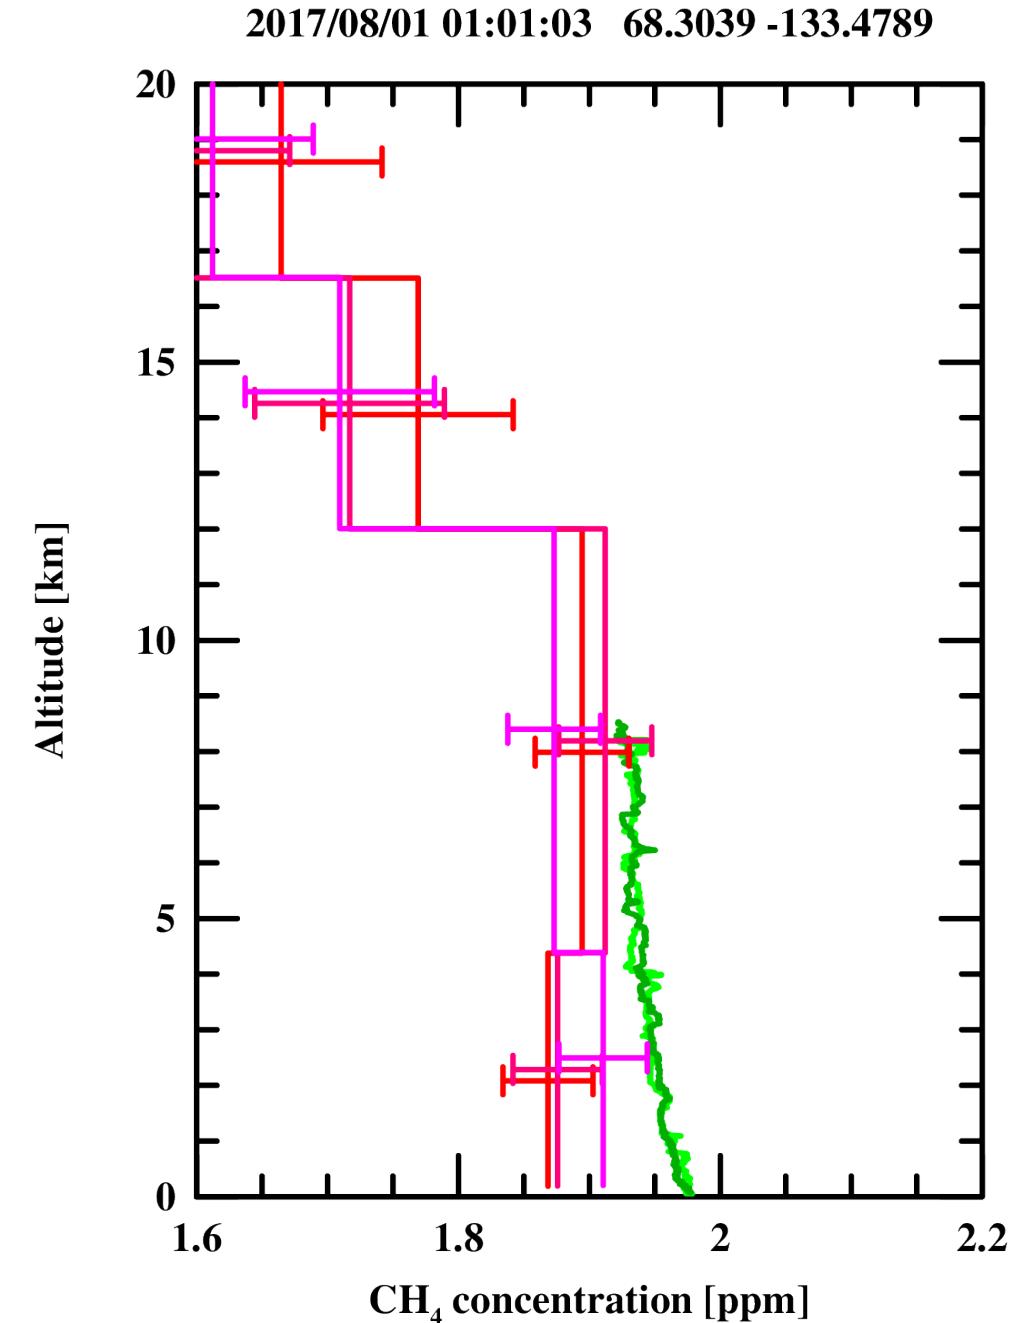

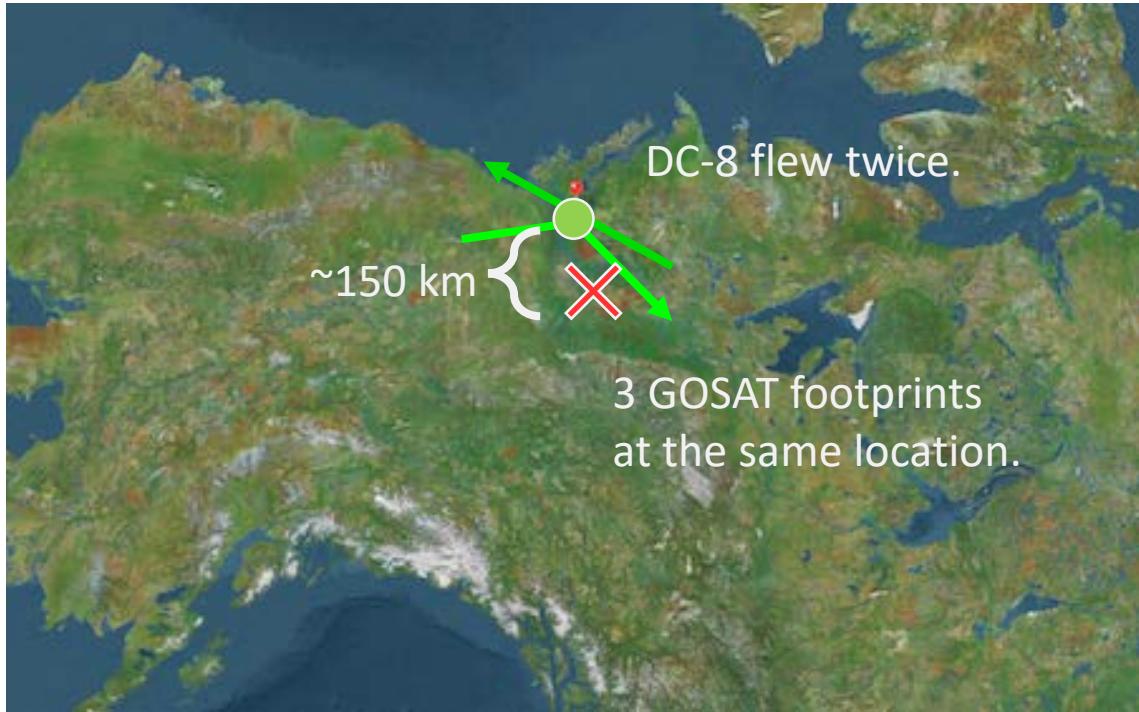

Case 1 (CO_2) : Inuvik

- 2 in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -1.5 \text{ hr}$

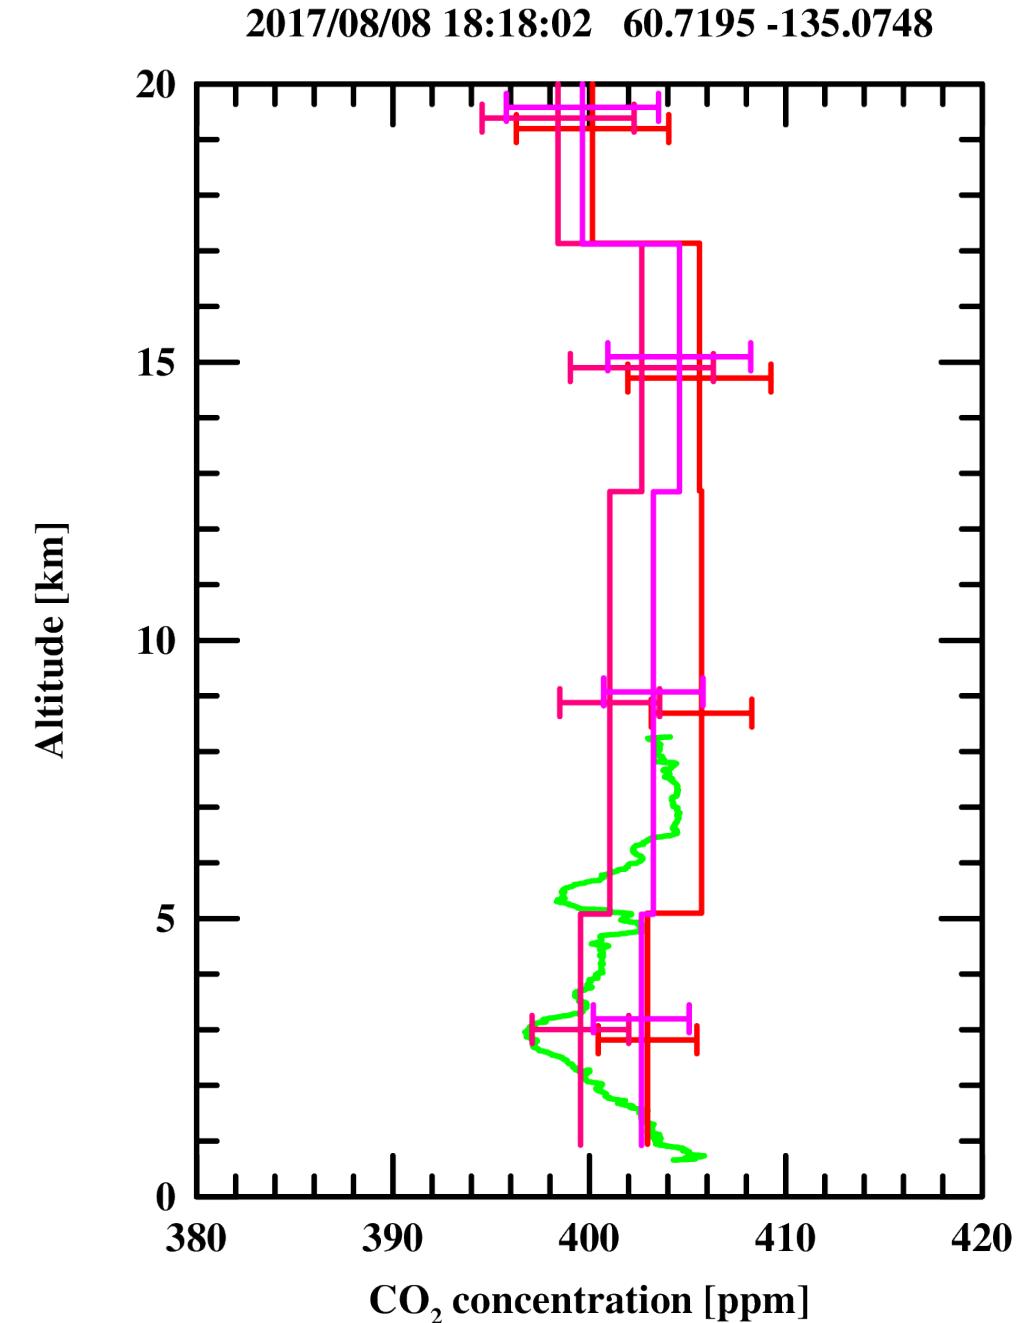

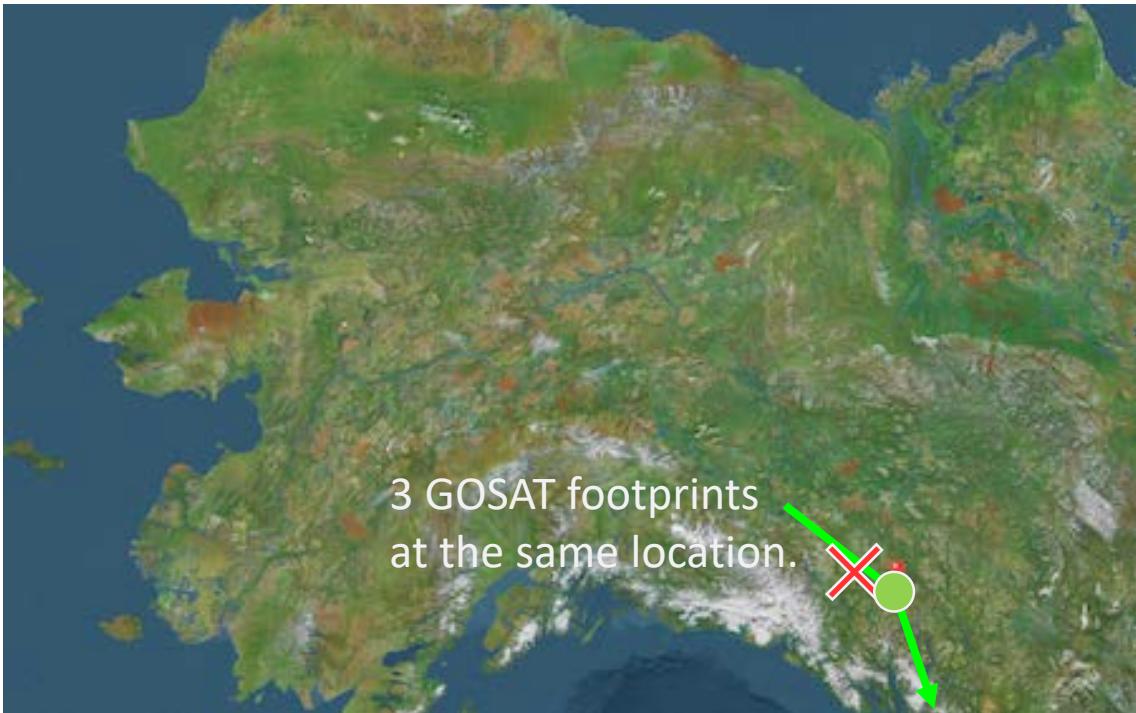

Case 1 (CH_4) : Inuvik

- 2 in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -1.5 \text{ hr}$

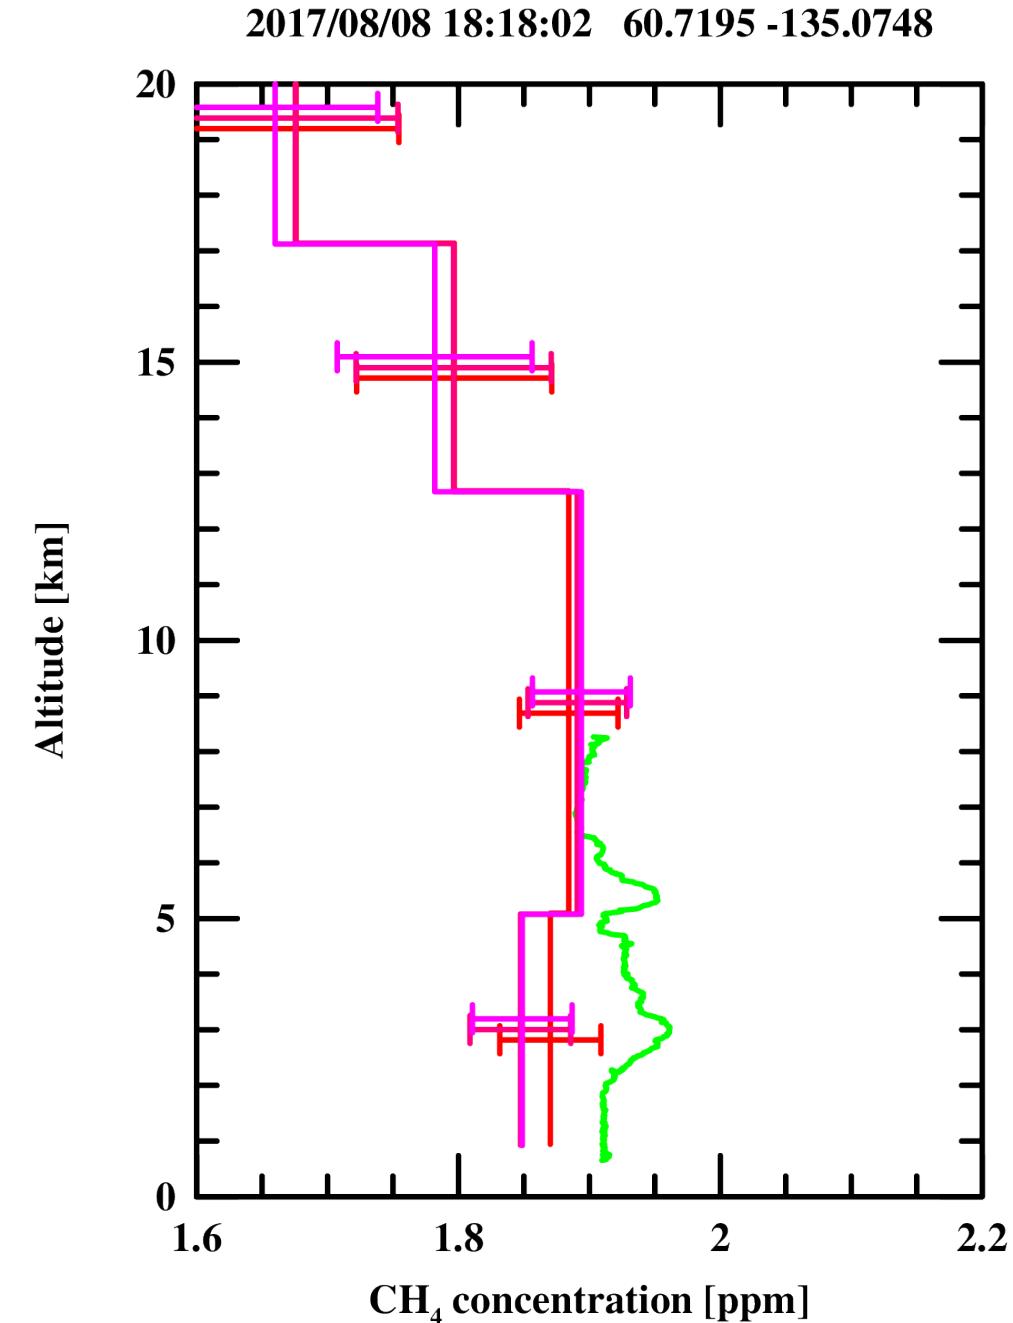

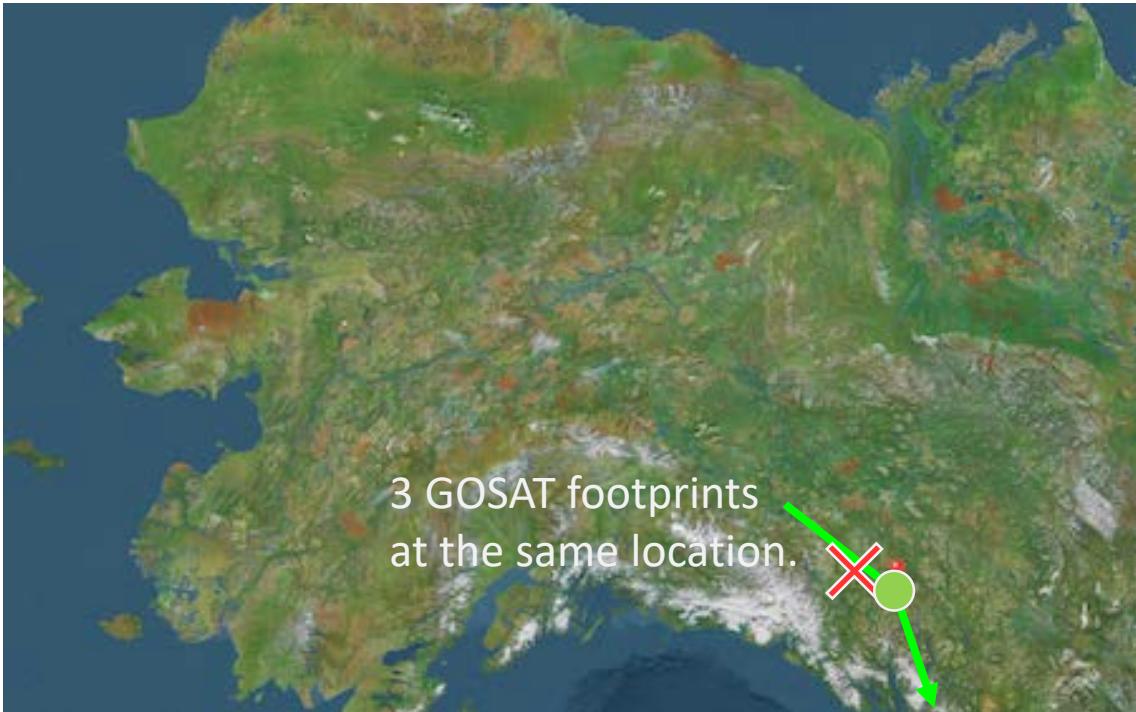

Case 2 (CO_2) : Whitehorse

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 4.7 \text{ hr}$

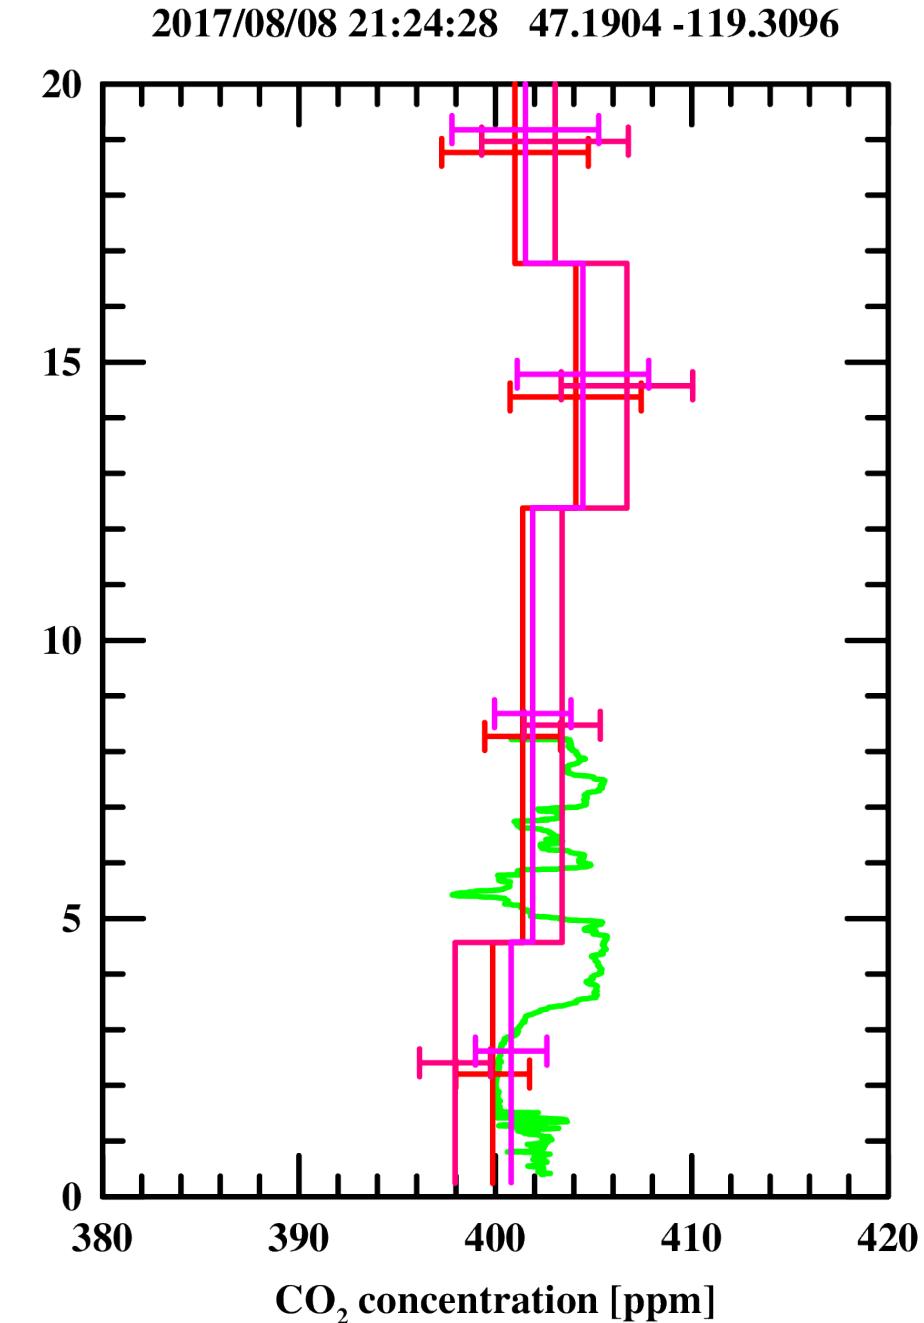

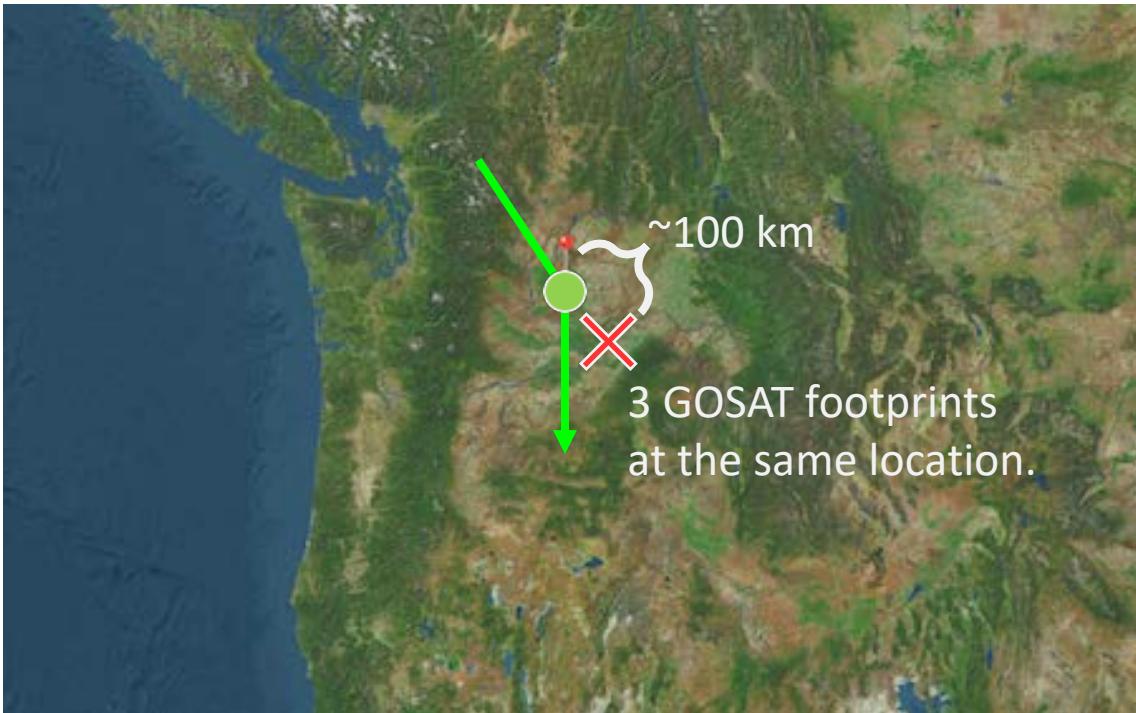

Case 2 (CH_4) : Whitehorse

- 1 *in situ* profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 4.7 \text{ hr}$

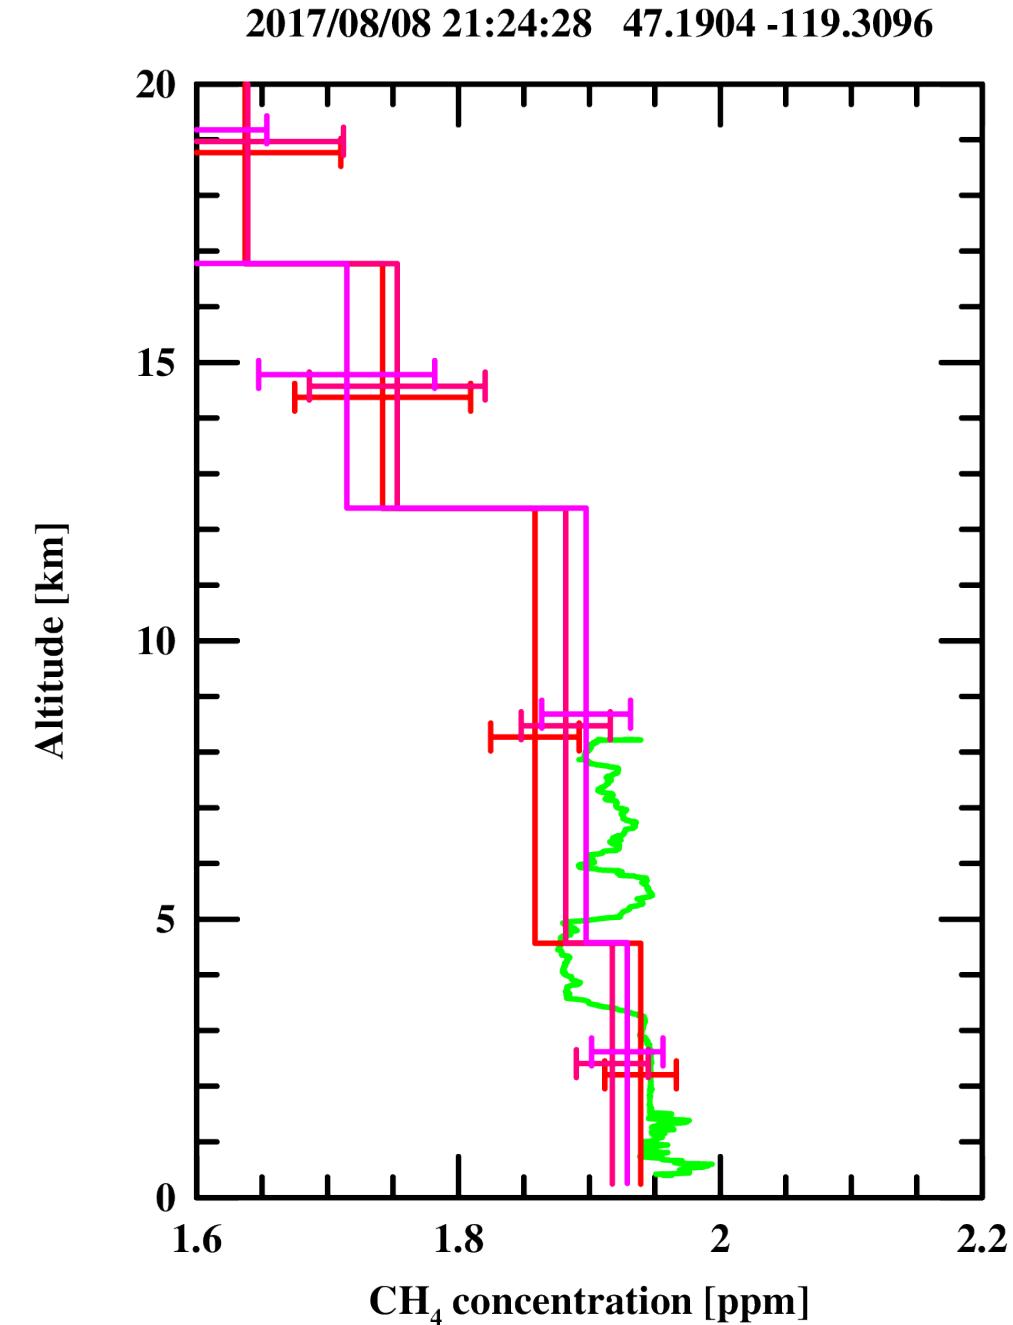

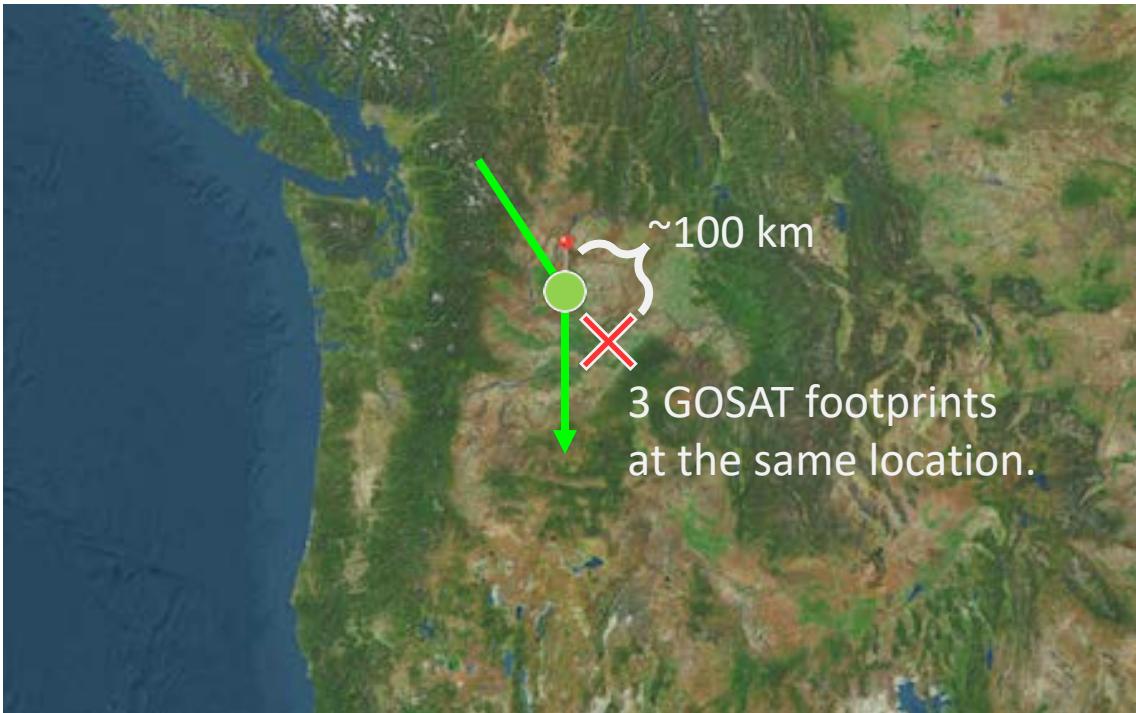

Case 3 (CO_2) : Moses Lake

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 0.0 \text{ hr}$

Case 3 (CH_4) : Moses Lake

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 0.0 \text{ hr}$

Summary

- From GOSAT SWIR and TIR observations, we retrieved tropospheric concentrations of CO_2 and CH_4 , which can be used for monitoring GHG emissions in the permafrost regions.
- Comparison with the ASCENDS/ABoVE 2017 campaign data shows that for CO_2 , GOSAT retrievals agree well with the in situ airborne measurements.
- For CH_4 , however, GOSAT retrievals are underestimated. Further investigations are needed.

Thank you for your attention.

Backup slides

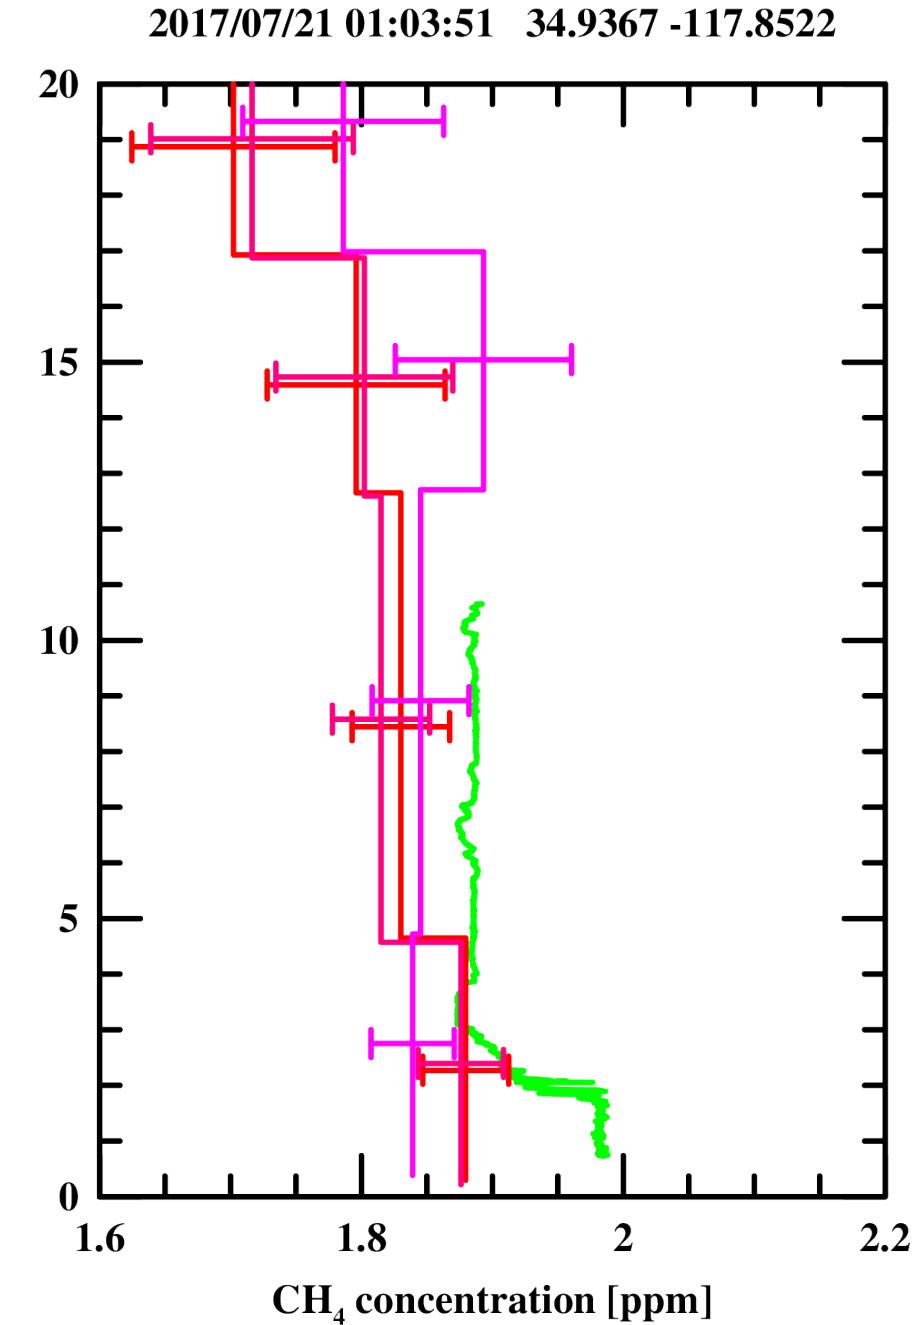

Case 4 (CO_2) : Edwards AFB

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -4.1 \text{ hr}$

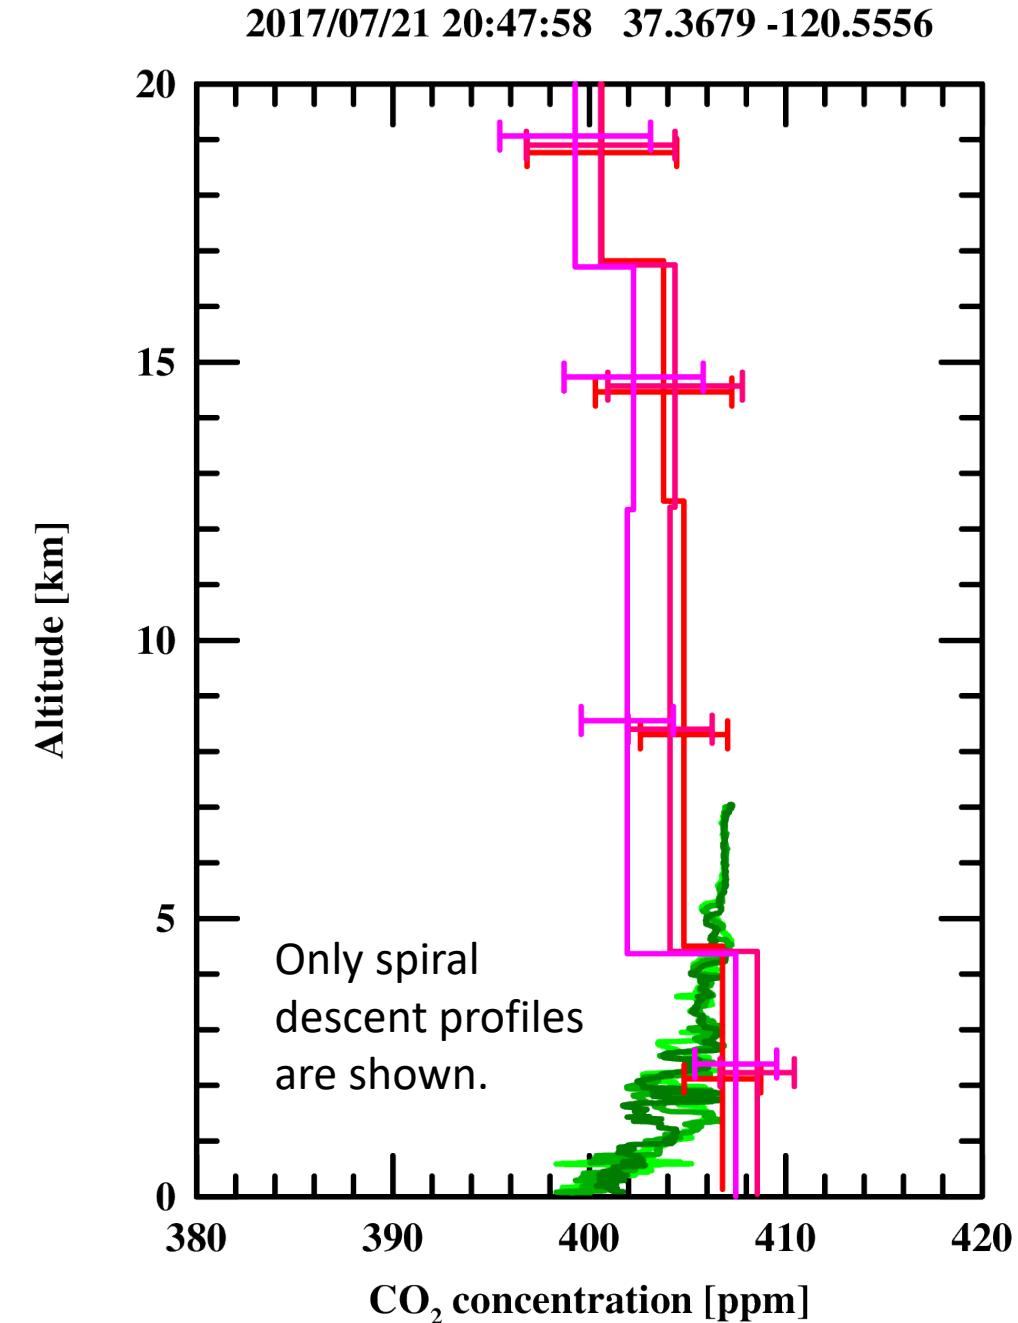

Case 4 (CH_4) : Edwards AFB

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -4.1 \text{ hr}$

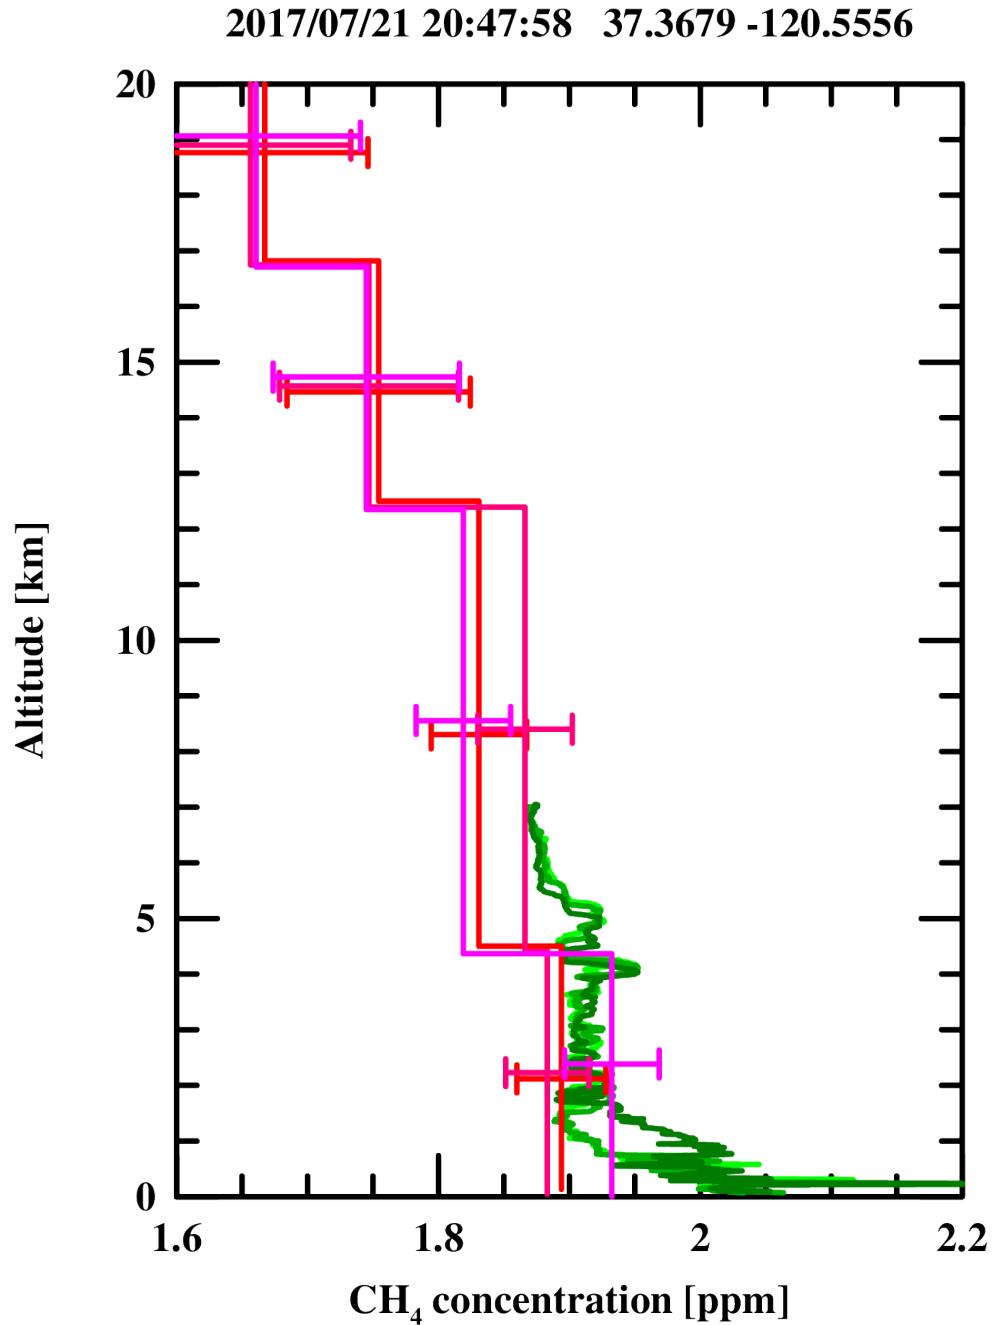

Case 5 (CO_2) : Castle Airport

- 3 (6) in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 0.7 \text{ hr}$

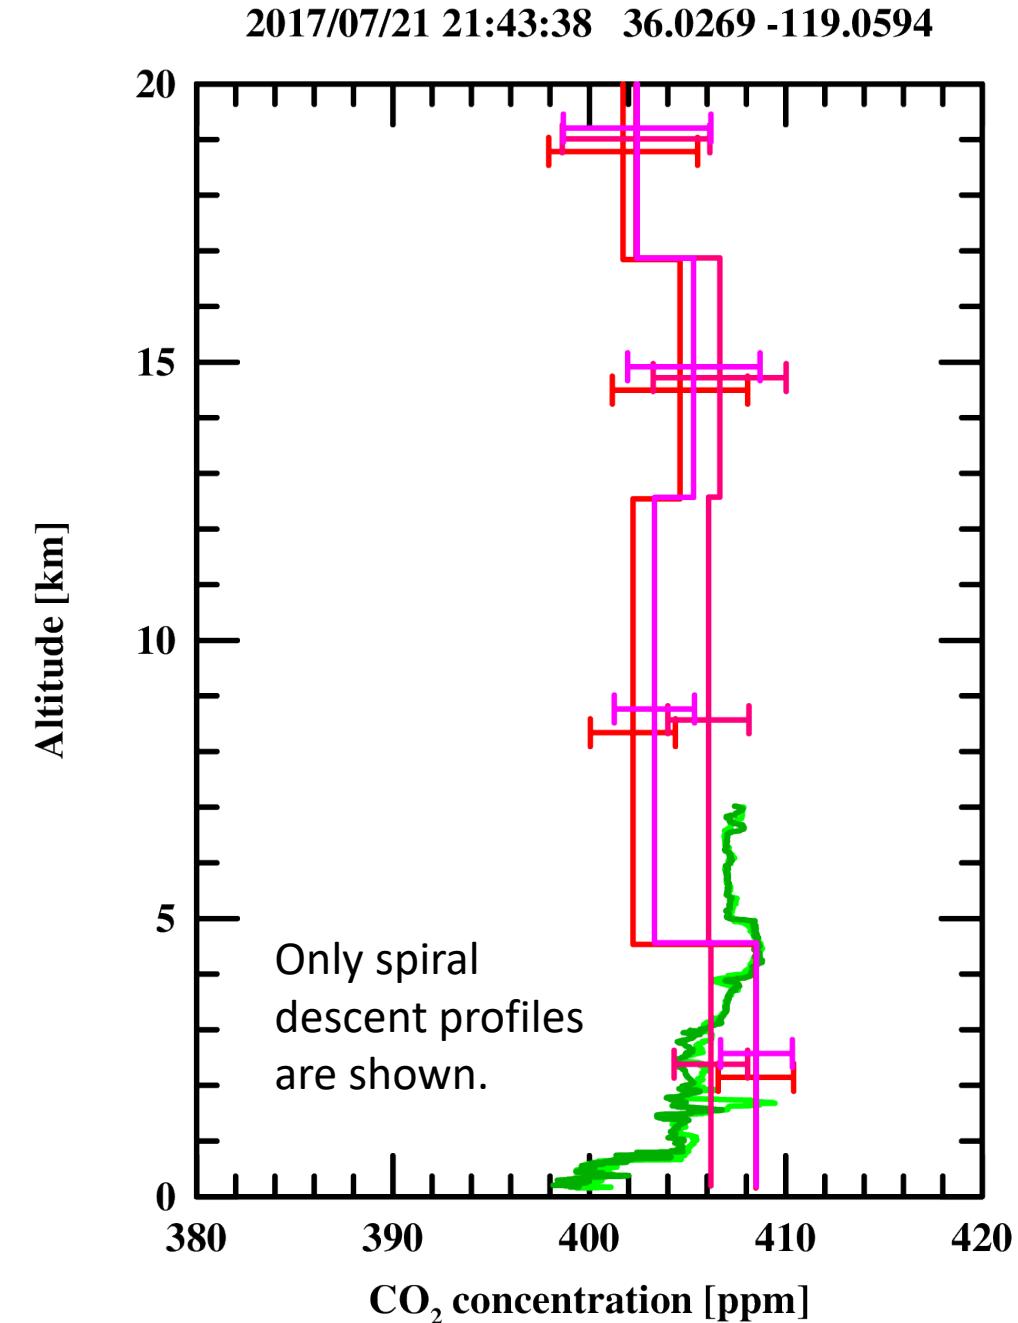

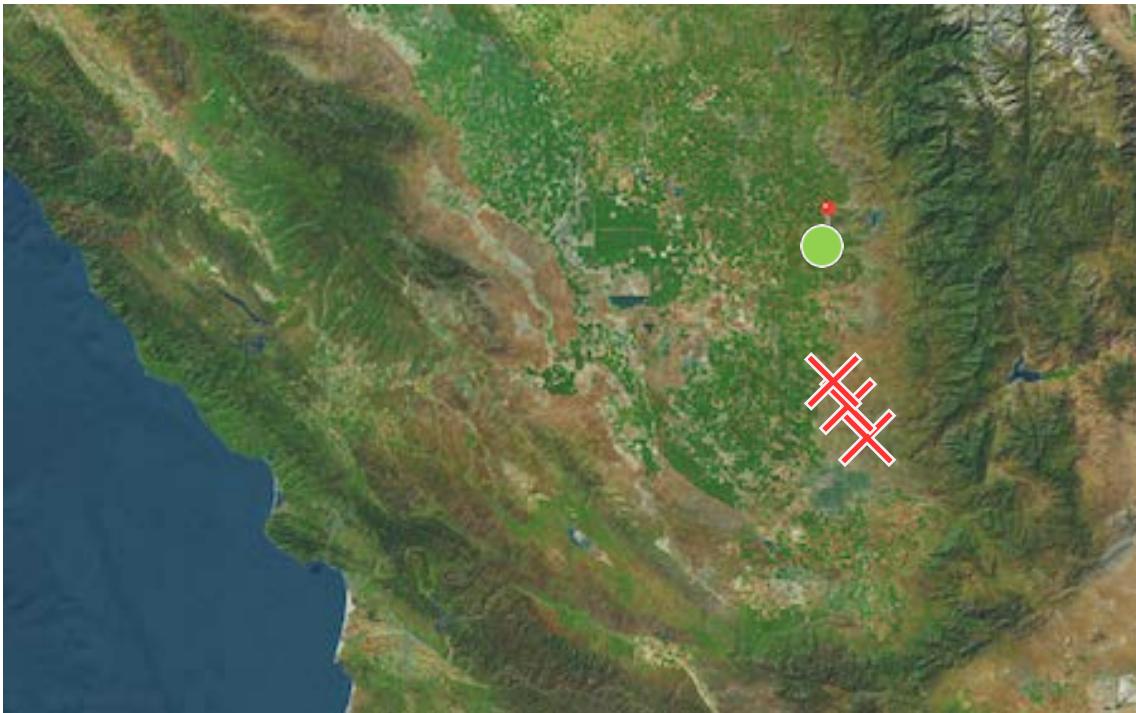

Case 5 (CH_4) : Castle Airport

- 3 (6) in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = 0.7 \text{ hr}$

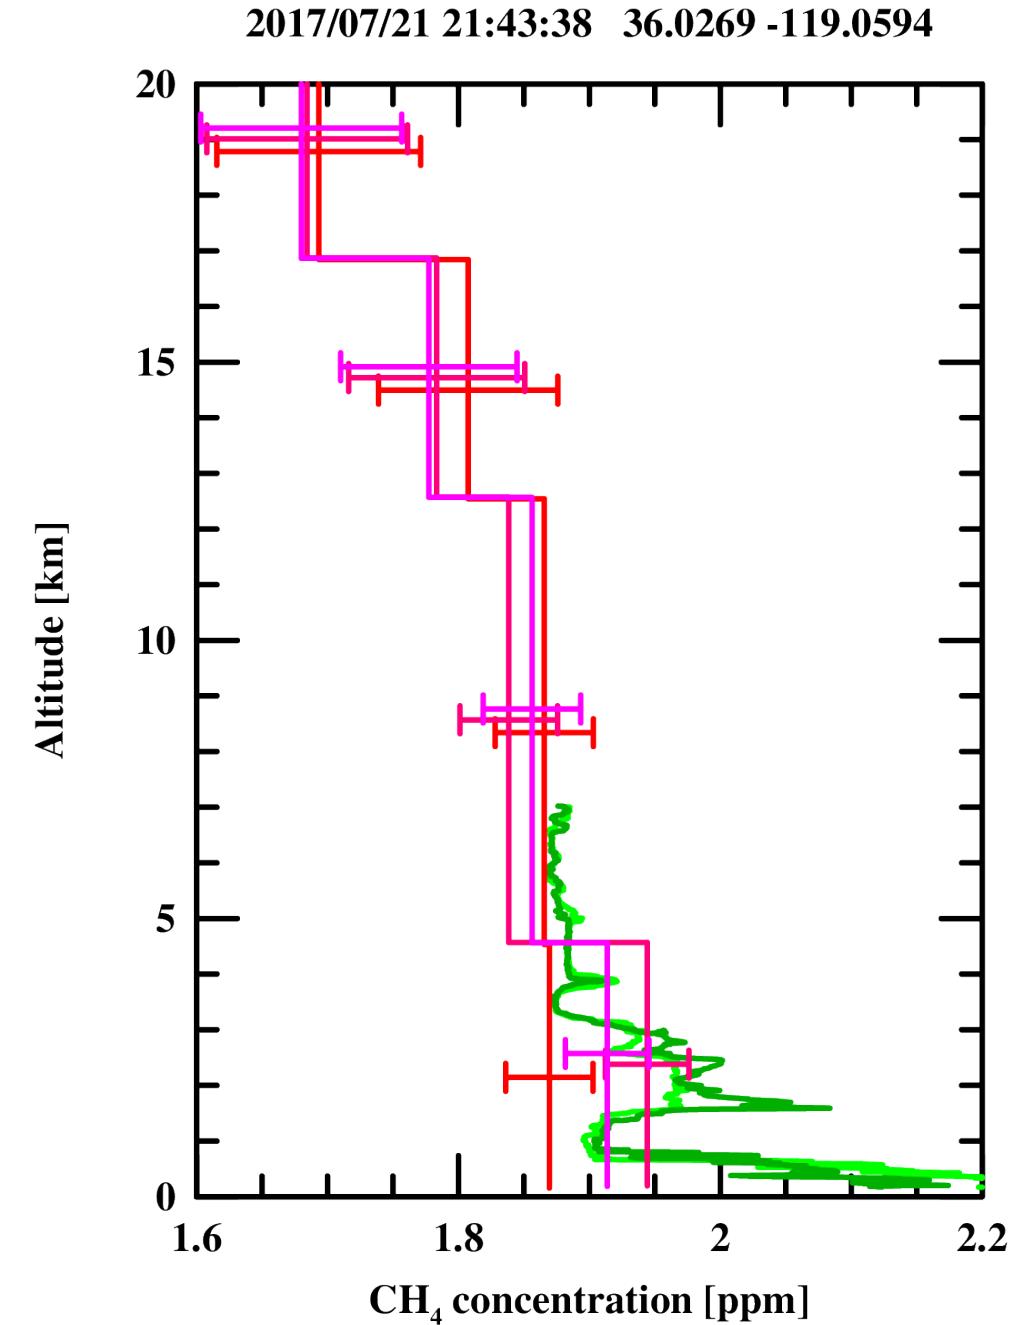

Case 6 (CO_2) : Porterville

- 2 (4) in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -0.3 \text{ hr}$

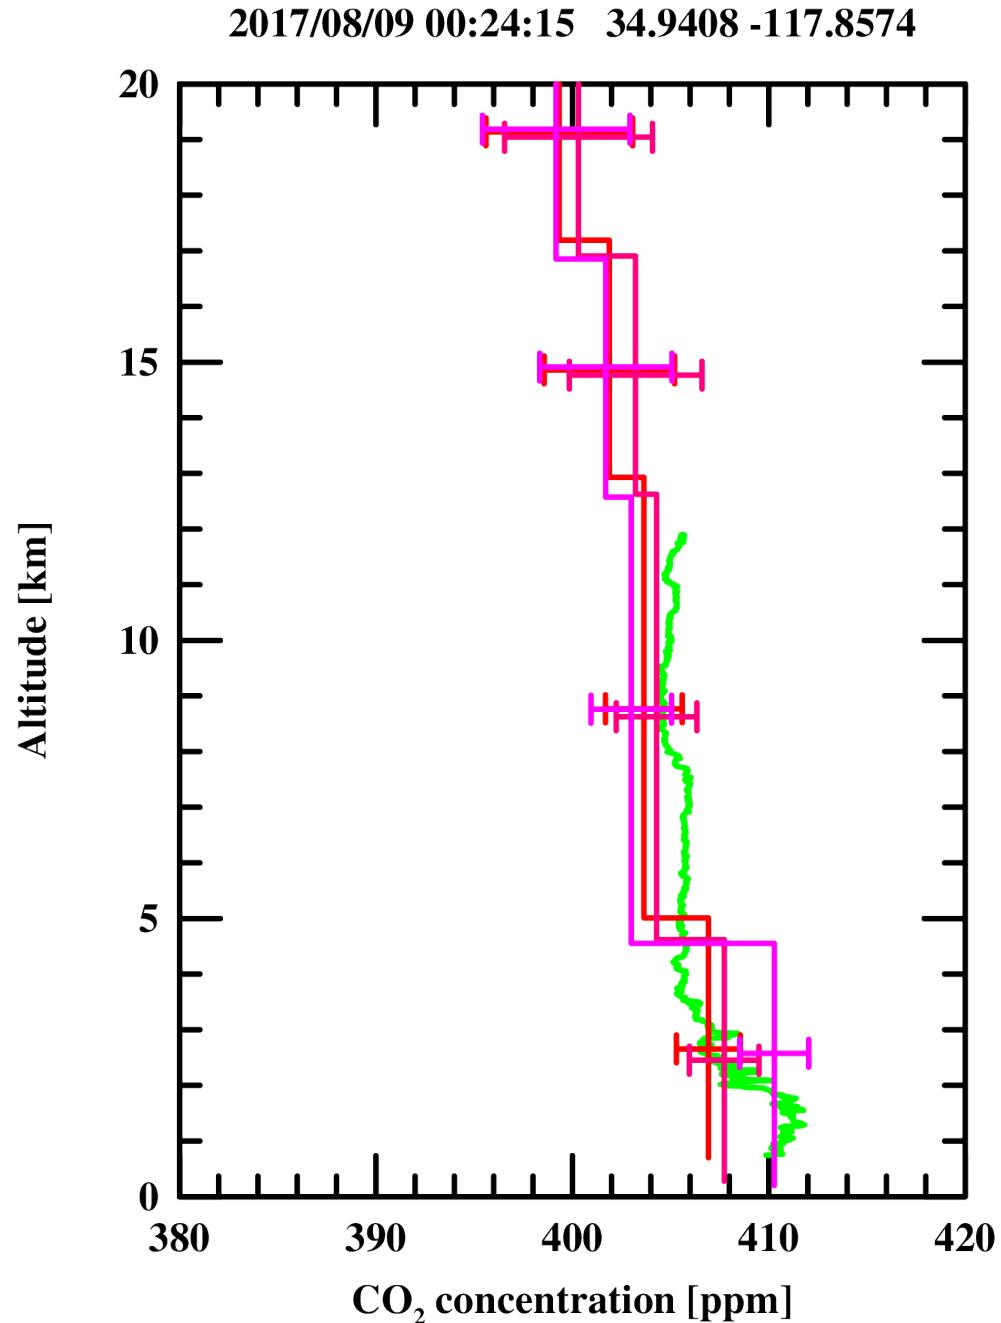

Case 6 (CH_4) : Porterville

- 2 (4) in situ profile measurements
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -0.3 \text{ hr}$

Case 7 (CO_2) : Edwards AFB

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -2.9 \text{ hr}$

Case 7 (CH_4) : Edwards AFB

- 1 in situ profile measurement
- 3 GOSAT observations
- $\Delta T = T_{\text{GOSAT}} - T_{\text{DC-8}} = -2.9 \text{ hr}$
